SUSTAINABLE DEVELOPMENT ACTION – THE NORDIC WAY

The 2030 Agenda, adopted by the UN General Assembly in September 2015, outlines an ambitious and universal plan of action for people, planet and prosperity as it seeks to strengthen universal peace and freedom. This report presents national and Nordic action on Agenda 2030 with the aim to inform and support the Nordic Council of Ministers in formulating a new Nordic Sustainable Development Programme.

All Nordic countries are engaged and strongly committed to implementing Agenda 2030 and there is a broad societal interest in joint Nordic action. The existing Nordic Strategy for Sustainable Development and several other key initiatives within Nordic cooperation already contribute to the goals of Agenda 2030. A new Nordic Sustainable Development Programme can build upon a strong foundation and add further value to the national and international work done by the Nordic countries.
Sustainable Development Action – the Nordic Way

Implementation of the Global 2030 Agenda for Sustainable Development in Nordic Cooperation

Nordic co-operation
Nordic co-operation is one of the world’s most extensive forms of regional collaboration, involving Denmark, Finland, Iceland, Norway, Sweden, the Faroe Islands, Greenland, and Åland.

Nordic co-operation has firm traditions in politics, the economy, and culture. It plays an important role in European and international collaboration, and aims at creating a strong Nordic community in a strong Europe.

Nordic co-operation seeks to safeguard Nordic and regional interests and principles in the global community. Shared Nordic values help the region solidify its position as one of the world’s most innovative and competitive.

Executive Summary

This report for the Nordic Council of Ministers, prepared by Gaia Consulting Ltd and Stockholm Environment Institute, informs and supports the Nordic Expert Group on Sustainable Development in formulating a new Nordic programme in response to Agenda 2030.

The 2030 Agenda, adopted by the UN General Assembly in September 2015, outlines an ambitious and universal plan of action for people, planet and prosperity as it seeks to strengthen universal peace and freedom more broadly.

This report maps and reports ongoing national and Nordic sustainable development processes and initiatives, priorities and challenges, in order to identify, analyse and recommend elements of a new Nordic programme in response to Agenda 2030, including communication of the Sustainable Development Goals (SDGs). The report is based on an extensive document study, 46 interviews with national stakeholders, dialogue with the senior officials’ committees of all ten sectorial Nordic Councils of Ministers, and a major dialogue meeting with stakeholders from government, the private sector and civil society, held in Helsinki on 29 November 2016.

The mapping and analysis indicate that good foundations exist for the outlining of a joint, Nordic cooperation programme on the SDGs. All Nordic countries are engaged in serious work to implement Agenda 2030; collectively they top the charts in global sustainability rankings and the work they are undertaking is supported by a strong commitment from the highest political level. While noting differences in the eight country profiles on Agenda 2030 implementation, for example related to governance and implementation processes, there is nevertheless broad interest in joint Nordic action on Agenda 2030 from across a wide spectrum of stakeholders, covering representatives of government, the private sector and civil society. The Nordic region already has a sustainable development strategy in place (the first of its kind in the world), which naturally has close links to the SDGs. A set of sustainable development indicators is also already in place, which can be further developed and used to monitor joint Nordic progress on Agenda 2030.
Several current and planned actions within Nordic cooperation can contribute to the goals of Agenda 2030 and the forthcoming programme will build upon already existing and planned Nordic initiatives in a complementary and synergistic manner. The Nordic Prime Ministers’ Initiative on Nordic Solutions to Global Challenges to be launched in 2017 is an example of such an initiative that will contribute to the overall Nordic response to the attainment of the SDGs.

The report outlines the main guiding principles and suggested aims, targets and focus areas for the forthcoming programme. The aim of the programmes is to launch joint Nordic activities, which add value to the national and international work done by the countries, providing a strong focus on the implementation, learning and harnessing of synergies. Hence a programme consisting of four main components is suggested including i) Pilot projects for accelerated SDG action, ii) Exchange of information on the national implementation of Agenda 2030, iii) Knowledge sharing on SDGs and Nordic SDG action; and iv) Communication. It is expected that the programme will fund concrete pilot actions with upscaling potential and launch a broad set of communication and knowledge sharing activities, as well as facilitating dialogue in support of policy development. While programme activities related to knowledge sharing, policy development and communication are envisioned to encompass all jointly agreed upon SDGs and Nordic SDG work in general, it is expected that the pilot projects will focus more specifically on themes prioritised during the mapping study, falling broadly under the umbrella of sustainable consumption and production.

The Nordic Expert Group for Sustainable Development, which includes representatives, central to the national implementation of Agenda 2030, has been mandated to plan the new Nordic programme and the Ministers for Nordic Cooperation (MR-SAM) have allocated a budget for the implementation of the programme. A decision on the programme will be prepared by the Nordic Expert Group for Sustainable Development during the spring of 2017. The process will include consultations with relevant committees within Nordic cooperation while the final decision will be made by the Ministers for Nordic Cooperation in September 2017. This report serves as a knowledge base for that decision.
Introduction

Background

The Nordic Strategy for Sustainable Development was the first macro-regional strategy of its kind while sustainable development has been a core aspect of Nordic cooperation for many years.

When, in September 2015, the United Nations adopted the 17 new Sustainable Development Goals (SDGs. Figure 1) and their 169 targets, the Nordic countries, along with many other countries, began reviewing and upgrading their own processes for implementing the ambitious goals by 2030.

Figure 1: The Sustainable Development Goals of Agenda 2030

The 2030 Agenda adopted by the UN General Assembly in September 2015 outlines an ambitious and universal plan of action for people, planet and prosperity as it seeks to strengthen universal peace and freedom more broadly. It sets an inspirational and targeted framework for eradicating poverty in all its forms and dimensions, as well as outlining a way in which to shift the world onto a more sustainable and resilient path while recognising the integrated and indivisible nature of the economic, social and environmental dimensions of sustainable development. The concrete attainment of these goals is both a massive and inspiring challenge for mankind.

Against this backdrop, and acknowledging the urgency of the global Agenda, the Ministers for Nordic Cooperation decided to renew their co-operation on sustainable development. The Nordic Expert Group for Sustainable Development\(^1\) was tasked with developing a new programme in response to the SDGs.

### Aims and objectives of the report

The overarching aim of this report, prepared by Gaia Consulting Ltd and Stockholm Environment Institute\(^2\) for the Nordic Council of Ministers, is to inform and support the Nordic Expert Group on Sustainable Development in formulating a new Nordic programme in response to Agenda 2030. This was done by:

- Mapping and reporting ongoing national and Nordic sustainable development processes and initiatives to analyse the potential added value of Nordic co-operation on Agenda 2030.
- Identifying priorities, challenges and potential areas for co-operation, by interviewing 46 key stakeholders in Agenda 2030 implementation from government, the business sector and civil society.

---

\(^1\) The Nordic Expert Group for Sustainable Development consists of 1-2 members per Nordic country, in October 2016 the members were: Eeva Hellström (FI), Annika Lindblom (FI), Maria Ana Petrera (DK), Thomas Nicolai Pedersen (DK), Halla Nólsoe Poulsen (FO), Thomas Gaarde Madsen (GL), Rósa Guðrún Erlingsdóttir (IS), Danfríður Skarphéðinsdóttir (IS), Herbert Kristoffersen (NO), Inge Rydland (NO), Håkan Alfredsson (SE), Nannan Lundin (SE), Micke Larsson (ÅL).

\(^2\) The mapping process was undertaken by Mikko Halonen, Åsa Persson, Susanna Sepponen, Clarisse Kehler Siebert, Shane Quinn, Marika Brückl, Anu Vaahtera, Antti Isokangas and Caspar Trimmer.
• Linking these national overviews to key Nordic priorities and initiatives, collected from committees under the Nordic Councils of Ministers; identifying areas for co-operation.

• Organising a stakeholder dialogue meeting in Helsinki in November 2016 with 96 participants from all countries and sectors to discuss the preliminary outcomes.

• Recommending elements of a new Nordic programme in response to Agenda 2030, based on research, interview findings, dialogue with committees under the Nordic Council of Ministers and the stakeholder dialogue meeting.

• Providing recommendations on how to communicate the SDGs.

This report will serve as a basis for the Nordic Expert Group’s decision regarding a new Nordic programme in response to Agenda 2030.

Chapter 2 of this report presents the results of the mapping process in respect of how the Nordic countries currently work with the implementation of Agenda 2030, set in a global framework.

Chapter 3 presents the results of the mapping of Nordic co-operation on sustainable development. It analyses the Nordic strategy for sustainable development and its indicators in relation to the SDGs, and presents current programmes and prioritised themes of relevance for the forthcoming programme.

Chapter 4 concludes on the suggested main principles for a forthcoming Nordic SDG programme, positions it in relation to other Nordic initiatives, and provides recommendations on the contents of the programme.
1. National implementation of the Agenda 2030 goals: An overview

1.1 The Nordic countries and Agenda 2030 – global overview

Agenda 2030 signals a shift to a more universal understanding of joint global challenges. This shift is echoed in the Paris Agreement reached at COP21 in December 2015 which recognises the need for all nations and all actors (including private, public and civil society actors) to jointly address the climate challenge. Several challenges however remain, in practice, to be tackled when working towards these universal goals. For example, the universality of Agenda 2030 is not always fully appreciated, with the result that it is seen as a successor to the Millennium Development Goals (MDGs) and relevant to developing countries and development assistance programmes only. This despite the fact that the universal applicability of Agenda 2030 is clearly spelled out in UN Resolution adopting the goals.4

The Nordic countries, including autonomous regions, have a long tradition in advancing the goals of sustainable development at the national level as well as jointly internationally – including the 1972 launch of the UNEP in Stockholm, the formulation and launch of the already “classic” definition of sustainable development in the Brundtland report, as well as important Nordic input into the Rio summit in 1992, to the establishment of the MDGs in 2000, the launch of the first Nordic Strategy on Sustainable Development in 2001 and subsequently to the adoption of the SDGs in 2015. As such, it is no surprise that a majority of SDG targets are, in practice, relevant for the Nordic countries and are already expressed in the fourth and current Nordic Strategy for Sustainable Development, adopted in 2013.

3 While still referring to “the principle of equity and common but differentiated responsibilities and respective capabilities, in the light of different national circumstances”, e.g. the climate agreement explicitly notes the role of developing countries also providing climate finance.

Further, the Nordic countries have been assessed as being among the top most “SDG-ready” countries in the world and were all ranked in the top ten in the SDG index presented in July 2016 by SDSN and the Bertelsmann Stiftung (see Figure 2).\(^5\) These results are echoed in the Yale Center’s Environmental Performance Index, where the Nordic countries have consistently scored in the top tier since it was first reported in 2000, due to ambitious environmental policies.\(^6\) Similar patterns are visible when also considering country indices capturing the various social and economic dimensions of this policy, such as the UNDP Human Development Index, the Cornell University Global Innovation Index, and the OECD Better Life Index. At the same time, several Nordic countries score well above the world average in terms of their Ecological Footprint,

---

\(^5\)See the index website for methodology and results http://www.sdgindex.org/
\(^6\) See http://epi.yale.edu/
which suggests that significant challenges remain in terms of the environmental sustainability of consumption in the region.

Despite progress, Agenda 2030 implementation and compliance will clearly still pose a challenge and require further work in the Nordic countries – and even more so globally. For example, a 2015 review of Sweden’s performance on the SDG targets undertaken by SEI suggested that around 80 of the 107 targets (excluding means of implementation from the 169 targets) could not be considered fully met (Weitz et al. 2015). This assessment is consistent with a pilot OECD indicator framework for the SDGs that reported results for six countries in July 2016. It was found that the four Nordic countries included in the sample had reached only 13 to 23 (18–26%) of the 73 SDG targets measured (OECD 2016b). Hence, understanding better how the Nordic countries and autonomous regions can improve their own attainment of the SDGs, as well as how best they can contribute to and help other countries to advance along this pathway, while mutually learning from each other, is of vital importance.

How far have other countries around the world been able to move forward in terms of implementing Agenda 2030? It is still early days, but reviews of the initial steps taken are being compiled by governments themselves, researchers and civil society – several of which cover the Nordic countries. At the UN High-Level Political Forum (HLPF) in July 2016, the first round of Voluntary National Reviews were presented; 22 in total (including Norway and Finland). Several independent reviews have also been published, e.g., a review of Germany (Scholz et al. 2016); a comparative review of policy coherence initiatives for Agenda 2030 in Sweden, Finland, Germany, the Netherlands and Korea (O’Connor et al. 2016); an OECD survey compiling 18 country reports (including Denmark, Finland, Sweden) (OECD 2016a); and a civil society review of early national implementation in the nine countries participating in the High-Level Group on Agenda 2030 (including Sweden) (Hansson et al. 2016).

There is also ongoing work on Agenda 2030 implementation taking place in a range of inter-governmental organisations, and international/regional/Nordic networks of academia, civil society and business.

The EU was active in the SDG negotiation phase specifically in relation to Member State coordination issuing several policy papers on key priorities.7 Regarding implementation, the Commission presented a plan in November 2016, “Next steps for

---

Sustainable Development Action – the Nordic Way
a sustainable European future: European action for sustainability,” formally launched at a high-level policy summit in December 2016. The plan was accompanied by three other documents: a mapping of existing EU policies and strategies under each SDG, an initial Eurostat baseline study reporting on a few indicators per SDG, and a revised European Consensus on Development establishing a set of principles designed to make development co-operation coherent with the 2030 Agenda.

In relation to the 2030 Agenda, the EU is seeking to be a leader and trailblazer. Responsibility for sustainable development has been moved from the Environment Commissioner to First Vice President Frans Timmermans and the European Political Strategy Centre, which brings the SDGs into the centre of EU governance. The Commission will take implementation forward with the Council and European Parliament and establish a multi-stakeholder platform for follow-up and the exchange of best practices across sectors. Two separate implementation tracks are envisioned. The first is to mainstream Agenda 2030 into the European policy framework and current Commission priorities, guided by the November 2016 plan. The second is to launch reflection work on developing a longer term vision and a vision for sectoral policies after 2020 while also ensuring consistency with the new Multiannual Financial Framework beyond 2020.

The mapping of existing EU domestic and external dimension policy under each SDG, as well as how well the SDGs match the Commission’s ten priorities, shows that all SDGs are currently addressed, but further focused action in all areas will be required. To avoid the implementation of SDGs taking place in a political vacuum, the Commission is looking to exploit synergies with the Commission’s ten priorities. No specific or new focus areas or activities are proposed in the plan, but a mainstreaming approach is advocated. Specific tools mentioned for this purpose include better regulation tools (e.g., the impact assessment procedure) and continuing to address all

---

9 See https://ec.europa.eu/epsc/events/europes-response-to-sustainability-challenges_en
three dimensions of sustainable development in the EU budget and spending programmes.

Regarding follow-up, the Commission commits to regular reporting on progress to the UN HLPF, although no timetables are provided. Eurostat is to develop a reference indicator framework, drawing on the 2016 study that aimed to bridge the existing indicators for the previous EU Sustainable Development Strategies and the new indicator set, and start reporting on this from 2017 onwards.

The OECD has also been active in terms of developing approaches and synthesising lessons for Agenda 2030 implementation. Agenda 2030 has become a significant focus in its work on Policy Coherence for Sustainable Development, with publications and guidance, online dialogue, stakeholder partnership, and meetings for national focal points.\(^3\) In June 2016, an OECD Action Plan on the SDGs was presented, calling for specific actions and functions as well as the mainstreaming of the SDGs across the OECD’s work (OECD 2016c). As noted above, the provision of data and indicators for gap analysis for the SDGs has already begun with a pilot indicator framework released earlier in 2016 (OECD 2016b). In addition, a conference on sharing experiences from the coordination of Agenda 2030 for central government officials took place in October 2016, organised by the Public Governance department.

The UNECE has a long-standing theme on sustainable development in Europe and Central Asia. It supports both individual countries and UN headquarters with implementation and monitoring. Dialogue meetings on SDG implementation were held earlier in 2016 and a survey, on implementation plans, covering all member countries has been conducted.\(^4\)

With a basis in academia, the Sustainable Development Solutions Network (SDSN) has established a Northern Europe network, with a project office located in Gothenburg.\(^5\) It aims to connect academia, business, government and civil society to develop solutions in respect of attaining the SDGs. Thus far, it has some 35 members consisting mainly of universities and research institutes in the Nordic region and Baltic States while a series of Solutions Initiatives Forums are planned for 2017.

On the civil society side, SDG Watch Europe is a new, EU-level, cross-sectoral CSO alliance of NGOs from the development, environment, social, human rights and other

\(^{3}\) http://www.oecd.org/pcd/
\(^{4}\) http://www.unece.org/index.php?id=42256
\(^{5}\) http://www.unsdn-ne.org/
sectors, with the goal of holding governments to account as regards implementation of the 2030 Agenda.\textsuperscript{16} In Development-oriented NGOs in Europe gather together in the umbrella organisation CONCORD Europe which has actively campaigned in the SDG process.\textsuperscript{17}

Within business, several international networks and organisations are active on the SDGs issue. The World Business Council on Sustainable Development, UN Global Compact and the Global Reporting Initiative have together developed the SDG Compass tool, to support companies measure and manage their contribution to the SDGs.\textsuperscript{18} WBCSD reports that in 2016 nearly a third of their member companies already report on the SDGs in their sustainability reporting.\textsuperscript{19}

In parallel with the SDG negotiations in 2013–2015, a process on Financing for Development took place in the UN, culminating with the Addis Ababa conference in July 2015. The resulting Action Agenda restated the need to meet the Monterrey target for official development assistance (ODA), but also noted the role of the private sector and domestic public resources in respect of their financing of sustainable development. Thus far, the trend seems to be that funding for SDG attainment and supporting implementation work is mainstreamed into the general government budget and ODA budgets, rather than specific SDG funds being set up.

1.2 Denmark

1.2.1 Introduction and background

Denmark has a strong track record in development co-operation and international engagement. It secured a first place ranking in the 2015 Commitment to Development Index. Denmark’s official development assistance (ODA) is above its international commitment of providing 0.7% of its gross national income (GNI) as ODA. Provisional figures for 2015 show that Danish ODA stood at USD 2.6 billion, making Denmark the thirteenth largest donor by volume.

\textsuperscript{16} See http://www.sdgwatcheurope.org/
\textsuperscript{17} See https://concordeurope.org/who-we-are/our-members/
\textsuperscript{18} http://sdgcompass.org/
\textsuperscript{19} http://www.wbcsd.org/Clusters/Social-Impact/News/New-research-shows-SDGs-matter-to-leading-global-businesses
As a member of the Open Working Group on Sustainable Development Goals (SDGs), Denmark has played a strong leadership role in the development of Agenda 2030. Key areas here have been the promotion of human rights and support for peacebuilding and stabilisation. Denmark’s high level of political engagement on gender equality, and on sexual and reproductive health and rights has contributed to more progressive language being incorporated into the global goals (OECD 2016d).

### 1.2.2 Timeline

The past, present and future activities and milestones of Denmark’s national implementation are presented in the table below.

<table>

</tr>
</tbody>
</table>

The action plans for the follow-up on Agenda 2030 are currently a work in progress. In Denmark the Ministry of Foreign Affairs is currently developing a single, strategic action plan for follow-up at national and international level (Permanent mission of Denmark to UN, 2016). The plan is expected to be ready by the beginning of 2017.

A draft strategy – Verden 2030, Udkast Danmarks udviklingspolitiske og humanitære strategi – on development goals has already been published (Danida, 2016). It includes some prioritised areas for Denmark’s development co-operation and outlines which SDGs lie within the Danish priority areas.
1.2.3 Governance structure for Agenda 2030 and stakeholder participation

The action plan for Agenda 2030 follow up is currently being developed by the Ministry of Foreign Affairs in co-operation with all other ministries and with input from civil society, the private sector and academia. The goal is to achieve a broad adoption of the action plan in the Danish parliament. The action plan aims to establish the framework for multi-stakeholder engagement and partnerships in both the national and the international dimension of follow-up. The coordination of the implementation of the action plan will be anchored in the Ministry of Finance to underline the universality of the Agenda (Permanent mission of Denmark to UN, 2016). The established inter-ministerial working group will continue to function as a cross-governmental coordination forum and coordinate implementation and actions on SDGs.

Civil society
Many NGOs have identified the main priorities in respect of SDG implementation and have plans to follow-up on these actions. NGOs are working on building broader awareness of the SDGs and related issues. In Denmark, World’s Best News (Verdens Bedste Nyheder), in co-operation with NGO’s like Oxfam IBIS, MS Action Aid and Save the Children initiated Verdenstimen”, which is a national campaign targeted at primary and high school students and part of “World’s Largest Lesson” produced by the UN.

NGOs have been calling for greater opportunities for dialogue on the Action Plan for the Agenda 2030 follow-up. A key issue raised by some NGOs here is that the government should increase its focus on domestic issues and potential weaknesses and gaps, in addition to leveraging strengths and focusing primarily on development issues, which is perceived as the current focus. The NGOs foresee active independent monitoring of the Action Plan for sectors relevant to different NGOs.

Private sector
The larger global companies in particular are currently working towards incorporating the SDGs into their business operations. Some are involved in the UN Global Compact LEAD and have previously been actively involved in the work of identifying the SDGs. Awareness of these issues is good in the largest global companies. The Danish Confederation of Industry is working to enable smaller and medium companies to work

20 http://verdenstimen.dk/
actively with the SDGs. Awareness of the SDGs and how the goals may be relevant for their business is still however quite low in smaller companies.

1.2.4 Existing and planned action plans

The follow-up action plan on Agenda 2030 will identify a limited number of national and international key priorities while respecting the universality and interdependence of the goals. The priorities will build upon the core strengths of Danish society – sustainable growth, a strong welfare system, and solid development co-operation. Areas will also be identified where extra effort is required. The action plan aims to establish the framework for multi-stakeholder engagement and partnerships in both the national and the international dimension of follow-up.

One central principle for Denmark’s external follow up in respect of the SDGs is that Denmark is committed to supporting developing countries in the implementation of the SDGs. The Agenda 2030 process and the SDGs constitute the central platform for Denmark’s development policy. Agenda 2030 goals will be integrated into Denmark’s development co-operation strategy, which will be aligned with the SDGs (Permanent mission of Denmark to the UN, 2016). The action plan will refer to the development strategy regarding external actions in the field of development co-operation. Follow-up within the EU will likewise play a central role.

Regarding the domestic focus on Denmark, the action plan will describe key priorities for domestic implementation. The action plan will be the primary umbrella document describing the framework for these activities.

In June 2016, the Danish Government launched a draft for a new development co-operation strategy, which had a public hearing during the summer 2016. The aim is to focus on a selected number of SDGs based on Danish key competencies, opportunities for partnerships and the possibility to create interesting results. The areas of strength identified are sustainable growth and development, a strong welfare society, gender equality and a strong commitment to development co-operation.

Statistics Denmark will establish yearly statistical reporting to the UN. Statistics Denmark is currently engaged in work on developing indicators for monitoring progress on the SDGs. A number of indicators will be chosen, some of which may be comparable with indicators used in the other Nordic countries.
It is suggested that the Danish government will report every four years on the status of the activities outlined in the action plan to the Danish Parliament. This will form the basis for the reporting to the UN. It is expected that Danish NGOs will conduct independent monitoring of progress across the different sectors relevant to them.

### 1.2.5 International engagement

The Danish development strategy draft states that Denmark aims to focus its international development co-operation efforts on the following SDGs: 3 (good health and well-being), 6 (clean water and sanitation), 7 (sustainable energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 11 (sustainable cities and communities), 12 (responsible consumption and production) and 13 (climate). Supporting the development of institutions (SDG 16) is also seen as fundamental as it is a necessary support in respect of efforts to attain the other SDG goals. (Danida, 2016)

The strong commitment to the 0.7 % ODA-target is also confirmed.

The level of effort will however differ for different categories of countries. Countries have been divided into three different categories, each with a different type of focus in respect of SDGs.

Both the climate agreement in Paris and the Sustainable Development Goals steer investments and development efforts towards resource-efficient water and energy solutions, where Denmark has strong competencies. The participation of the private sector is also regarded as essential in the efforts to reach the SDGs in developing nations (Danida 2016).

Denmark states that Official Development Assistance (ODA) continues to be very important for driving sustainable development, especially as it increasingly plays a catalytic role in generating diversified investments for sustainable development. A new initiative that aims to contribute to achieving the SDGs is a new financing institution, Verdensmålfonden (SDG fund) which will provide public seed funding to projects linked to the SDGs. The financing scheme aims to leverage the already provided public financing with private funds.

---

21 Handlingsplan vedr. Danmarks opfølgning på 2030 dagsordenen for bæredygtig udvikling og FNs verdensmål (in progress).
Denmark, represented by Statistics Denmark, is also a member of The High Level Group for Partnership, Coordination and Capacity Building for Statistics for the 2030 Agenda for Sustainable Development (HLG), established by the UN Statistical Commission in March 2015. The HLG is responsible for establishing and supporting a Member State-led reporting process at the global level and developing a Global Action Plan for Sustainable Development Data, expected to be published in January 2017.

### 1.2.6 Communication strategy

Thus far, no formal governmental communication plan for the SDGs has been put in place, but from 2017 and onwards, the government has, in the Finance Bill, appointed *World’s Best News*[^22] to handle a communication platform for SDG communication.

The Agenda 2030 follow-up Action plan aims to establish the framework for multi-stakeholder engagement and partnerships in both the national and the international dimension of follow-up. The Dialogue Forum for Growth and Corporate Responsibility has been tasked with providing private sector input into SDG implementation and thus securing ownership by and engagement with private sector, civil society, academia and others. The Forum will play a key role in driving implementation both domestically and abroad. The foreign ministry in particular is actively engaging in dialogue with different stakeholders in Denmark and internationally.

The Global Green Growth Forum (3GF), which has an international focus, is also mentioned as being another forum for engagement. Fora for EU engagement are also mentioned as being important.[^23]

### 1.2.7 Opportunities and challenges

Denmark will, based on its healthy point of departure in respect of SDG attainment, contribute to the broader implementation of the 2030 Agenda.

From a Danish perspective the Agenda 2030 follow up process presents many possibilities. Denmark is one of the countries that is best positioned to contribute to the fulfilment of the SDGs. Denmark is known for its sustainable growth, equality between men and women, an open democracy which respects human rights, a high level of social

[^22]: Based on information provided by the World’s Best News [http://verdensbedstenyheder.dk/verdensmaal/](http://verdensbedstenyheder.dk/verdensmaal/)

[^23]: Handlingsplan vedr. Danmarks opfølgning på 2030 dagsordenen for bæredygtig udvikling og FNs verdensmål.
welfare and a continuing commitment to development aid. Additionally, many Danish companies display a high level of expertise and have already demonstrated a commitment to sustainable practices as well as being involved in the Global Compact.

Both the climate agreement in Paris and the Sustainable Development Goals steer investments and development efforts towards resource-efficient water and energy solutions, where Denmark already displays strong competencies. Private sector participation is considered essential in the efforts to help developing nations move towards SDG attainment. The integration of the private sector into development co-operation and financing presents good opportunities for Denmark, which may enable further leveraging of the ODA allocations. One such example here is the new fund that provides seed financing to projects that are connected to SDGs. This seed money is leveraged by investments from the private sector.

A number of challenges have also been identified in respect of Denmark’s development co-operation, these include being better able to prioritise and focus the development co-operation effort and being able to choose key countries with which to cooperate. Denmark’s funding arrangements and ODA allocations have not always been perceived as being consistent with its strategic objectives (OECD, 2016d).

An additional potential challenge emerging from the Agenda 2030 follow-up process relates to the current political situation in Denmark. Namely, it is currently not clear just how deep the level of national commitment is to development issues or to those domestic issues connected with SDGs. Implementation of the plans will be dependent on the relevant ministries’ priorities and their levels of commitment. The fact that the finance ministry will be in charge of the implementation phase creates the potential to increase the possibility of coordinated efforts and may lead to an increased focus on domestic matters in addition to the external focus on development aid and foreign policy, something which has hitherto been a key strength for Denmark.
1.3  Finland

1.3.1  Introduction and background

Finland has had a sustainable development policy since early 1990s. The first national strategy for sustainable development was prepared in 2006 and reformed in 2013. The new strategy is called, Society’s Commitment to Sustainable Development “The Finland we want 2050”\(^{24}\) and also includes a multi-stakeholder implementation tool. Over 300 actors have signed operational commitments thus contributing to Finnish Society’s Commitment to the SDG process, including enterprises, schools, cities, administration, non-governmental and other organisations, communities, political parties and private individuals (Government of Finland (2016b), Finnish Government (2016b)).

The SD work in Finland aims at continuity and long-term planning rather than planning in terms of governmental cycles. The follow-up, reporting and evaluation all look further than one government term. The current national SD strategy provides a framework up to 2050.

Nationally, the eight objectives of Finnish Society’s Commitment to Sustainable Development constitute the basis for national focus areas: equal prospects of wellbeing; a participatory society for all; work in a sustainable way; sustainable society and local communities; a carbon-neutral society; a resource-wise economy; lifestyles respectful of the carrying capacity of nature; and decision-making respectful of nature.

1.3.2  Timeline

The past, present and future activities and milestones of the national implementation process are presented in the table below.

\(^{24}\) https://commitment2050.fi/
### Table 2: Activities and milestones for national SDG implementation in Finland

<table>
<thead>
<tr>
<th>Schedule</th>
<th>Milestone (Finnish Government 2016b)</th>
</tr>
</thead>
</table>
| 2016           | February: Government Report on Development Policy approved with strong emphasis on Agenda 2030.  
March: Government request to ministries and agencies to chart policy actions to Agenda 2030.  
July: National report on the implementation of the 2030 Agenda for Sustainable Development; Finland presents its first VNR to the UN HLPF.  
October: Expert panel for sustainable development provided proposal for topics of the implementation plan.  
October–November: Stakeholder consultations and workshops.  
October–December: Work for follow-up mechanism, incl. indicators for Agenda 2030 under way.  
December: Proposal for the Government’s implementation plan for Agenda 2030 available. |
| 2017           | February: Government approval of the implementation plan for Agenda 2030 and report to the Parliament. |
| 2017–2019      | During its Arctic Council presidency, Finland will emphasise Agenda 2030 implementation (Ministry for Foreign Affairs of Finland, 2016b). |
| Annual         | Government reporting to the Parliament on the implementation as part of the Government Annual Report.  
A high-level multi-stakeholder annual event “The state and future of sustainable development in Finland”. |
| Every fourth year | Reporting to the UN on Finland’s progress. |

### 1.3.3 Governance structure for Agenda 2030 and stakeholder participation

Figure 3 illustrates the governance structure for Agenda 2030 implementation in Finland. The coordination mechanism for the implementation of Agenda 2030, and key actors in Finland are as follows (Prime Minister’s Office 2016a).

- The government has primary responsibility for integrating the SDGs into all national policies. A coordination secretariat at the Prime Minister’s Office coordinates the national implementation of Agenda 2030 and the national sustainable development policy. The Prime Minister’s Office also functions as Secretariat General for the Finnish National Commission on Sustainable Development in co-operation with the Ministry of Environment.
• A sustainable development coordination network, comprised of representatives of key ministries, supports and guides the work of the coordination secretariat. Members of the coordination network provide contact points with those in charge of sustainable development within their respective branches of Government.

• The National Commission on Sustainable Development, led by the Prime Minister, brings together a broad range of stakeholders including civil society organisations, the business community and trade unions, as well as representatives from the regions and municipalities. One of the main tasks of the Commission is to follow-up and review the progress made in respect of the national implementation of Agenda 2030.

• The Commission is assisted by an expert panel for sustainable development, comprised of eight professors from various scientific disciplines, and hosted by the Finnish Innovation Fund, Sitra. The expert panel informs the work of the National Commission on Sustainable Development.

• The Development Policy Committee monitors and assesses the implementation of Finland’s development policy guidelines and international commitments generally, and Agenda 2030 implementation in particular. Members of the Development Policy Committee include representatives of the political parties, the NGOs engaged in development co-operation as well as representatives from business, research, agriculture and the trade unions.

• The Development Policy Committee and the National Commission on Sustainable Development have a common “Enterprises and sustainable development” working group for Finnish companies engaged with Agenda 2030 at home and abroad.

• A broad-based network on Agenda 2030 follow-up and review was established by the Prime Minister’s Office to advise on national follow-up mechanisms and to update the existing national sustainable development indicators.

• Members of Parliament and Parliament itself play a key role in national Agenda 2030 implementation, particularly in respect of progress monitoring. It has been decided that in the Parliament it is the Committee of Future that will take overall responsibility for the follow-up of the national Agenda 2030 implementation.

---

Additionally, the Coordination secretariat within the PMO engages in regular dialogue with interested parliamentarians. To increase participation and ownership of the Finnish Parliament, the government has proposed a Government Report to the Parliament on the national implementation of Agenda 2030 (Government of Finland, 2016a). On the regional level, the PMO and the Ministry of Foreign Affairs have organised Agenda 2030 events in co-operation with Finnish cities and other sustainable development actors.  

**Civil society**

NGOs have also engaged in an active ongoing dialogue with the government; opportunities provide input into SD-related processes and to participate in multi-stakeholder workshops are provided in a number of fora. The National Commission on Sustainable Development provides an institutionalized framework for dialogue and fosters common understanding between the Government and NGOs on issues related to sustainable development.

Significant variance nevertheless occurs in how NGOs have incorporated the SDG into their operations. Some have mapped their operations against the relevant SDGs while others have reflected that the SDGs have, through the idea of comprehensiveness and universality, raised awareness about sustainability issues outside of, but connected to, their core activities.

---

Development co-operation NGOs have been among the most engaged with Agenda 2030. Kepa\(^{27}\) has organised a coalition to gather together NGOs and labour market organisations under SD themes.

The National Commission on Sustainable Development is also undertaking co-operation with Allianssi, Finnish Youth Cooperation, to promote SD to children and young people. Representatives of minorities and of children and young people, the Non-Discrimination Ombudsman and the Ombudsman for Children in Finland have all been consulted during the preparation of the national implementation plan.

---

\(^{27}\) Kepa is the umbrella organisation for Finnish civil society organisations (CSOs) who work with development co-operation or are otherwise interested in global affairs. www.kepa.fi

---
Private sector

The Society’s Commitment to Sustainable Development is the most important means to integrate business into national SD work. The Commitment tool is the concrete way to involve companies in contributing to SD and to the implementation of Agenda 2030. The National Commission on Sustainable Development is a key forum for business organisations to participate in SD work.

The Ministry of Foreign Affairs, the Confederation of Finnish Industries; FIBS, Finland’s corporate responsibility network; and the Finnish Innovation Fund, Sitra, have all been active in promoting and discussing the SDGs from a business perspective.

1.3.4 Existing and planned action plans

The Government’s key focus areas and means of implementation, as well as follow-up and review framework for the Agenda 2030 are being defined in the Government’s implementation plan, adopted by the Government in February 2017.

Finland emphasises policy coherence for sustainable development. One of the key projects of the current Government, “Towards carbon-free, clean and renewable energy cost efficiently,” is an example of mainstreaming Agenda 2030 into national plans and strategies (Finnish Government, 2016a).

The national sustainable development indicators were identified in 2014 to measure the progress of the eight strategic objectives outlined in the Finnish Society Commitment. These indicators will be revised and updated to better meet the requirements for Agenda 2030 follow-up (Finnish Government, 2016a). The national network for follow-up and review, set up by the PMO, started their work in October. The network gathers together members from various ministries, research institutions and other stakeholder organisations. In addition to the statistical indicators, the objective is also to consider other means for follow-up – such as process indicators or other means for evaluation (e.g. annual dialogue meetings). The network aims to propose an updated set of national SD indicators to the National Commission on Sustainable Development in May 2017.

http://findikaattori.fi/en/kestavakehitys
1.3.5 International engagement

The most important sustainable development goals from the perspective of Finland’s foreign and security policy are: gender equality and empowering women and girls; reduction of inequality; fighting against climate change and its impacts; promoting peaceful societies; guaranteeing legal services for everyone; and accountable institutions. From the perspective of international influence other global objectives important to Finland are: safe living conditions; human rights and the possibility for people to make a difference in their own affairs; sufficient livelihoods and safe living environments (Prime Minister’s Office, 2016a).

The priority areas for development policy in respect of SDGs particularly in relation to how they will benefit other countries and societies and promote global sustainability are: rights of women and girls; reinforcing developing countries’ economies to generate more jobs, improve livelihoods and enhance wellbeing; democratic and well-functioning societies, including taxation capacity; food security, access to water and energy; sustainable use of natural resources (Ministry for Foreign Affairs, 2016a).

One of the objectives of Finland’s Nordic Council of Ministers presidency 2016 is to launch a process for the preparation of a Nordic sustainable development co-operation plan/programme to support Agenda 2030 implementation.

1.3.6 Communication strategy

General information about the SDGs has been offered by the Ministry of Foreign Affairs, in co-operation with the PMO, ministries, and NGOs. A government Agenda 2030 communications strategy will evolve in parallel with the national implementation plan. Currently, Agenda 2030 is communicated through events with NGOs and companies, in bilateral negotiations in Finland, and through the aforementioned Commitment tool. Print and social media have also been used. NGOs have been active in organising communication campaigns.

1.3.7 Opportunities and challenges

Finland is ranked the fourth most sustainable country in the world on the SDSN SDG Index. Based on the gap analysis conducted by a research group in spring 2016, Finland is doing extremely well in education and in the stability and functioning of society (Prime Minister’s Office, 2016b). However, looking especially at goals 8 and 13, where
Finland did not score so well, there are issues here that need to be urgently addressed: climate change and high unemployment, but also overconsumption of natural resources and increasing social inequality.

The risks identified in the context of the implementation process relate to political will and the inclusion of the regions and municipalities in decision-making. The implementation plan includes two types of activities: Politically relevant and nationally critical thematic focus areas for urgent implementation, (2) Longer term policy principles and framework for follow-up, review and reporting. Many things that are relevant from the Agenda 2030 perspective require municipal activity and commitment in order to have a real impact. The role of the Association of Finnish Local and Regional Authorities should also be strengthened in this context.

One such risk relates to the impact of future activities; can Finland move beyond the current raft of sustainability-related activities and provide real content and impact? If concrete results do not emerge in the short or medium term, interest in Agenda 2030 issues may fade. Few parliamentarians have been active in raising discussion in the Parliament. The first plenary discussion on the Agenda 2030 and the role of the Parliament was conducted in December 2016 in the Finnish Parliament. In February 2017 the Parliament discussed on the basis of the Government report on the implementation of the 2030 Agenda (the implementation plan).

From the citizens’ point of view however, Agenda 2030 and the SDGs do not seem to have penetrated deeply into the public consciousness. As such, there is a real challenge here to better activate the citizenry in respect of the SDGs.

When it comes to public R&D funding and other support, the SDGs have thus far not been taken into account. The activities of Team Finland and Cleantech Finland provide Finnish companies with opportunities to sell and export cleantech solutions on world markets (Finnish Government, 2016b). Responsible businesses or the SDGs have however not yet been integrated into the plans of these activities. A further question here concerns how to involve SMEs more directly in SDG-related work.

One final aspect of note here relates to the EU’s influence on national implementation: national implementation can really only have an impact on policies where Finland has its own mandate to decide. When it e.g. comes to trade policy, agricultural policy and emissions trading, the EU is the primary decision-maker.
1.4 Iceland

1.4.1 Introduction and background

Iceland ranks among the top five most sustainable countries in the world on the SDSN SDG Index (together with the other Nordic countries).

Sustainable development has been a long-time national priority, the first national strategy – “Welfare for the Future” – being adopted back in 2002, shortly before the World Summit in Johannesburg. The strategy set forth 17 objectives for environmental protection and resource utilisation, together with ancillary goals, and created a framework for Iceland’s policy on sustainable development through 2020. The top-priority tasks for the achievement of the 17 objectives were reviewed in 2005 and again in 2009.29

The Iceland 2020 – governmental policy statement for the economy and community – Knowledge, sustainability, and welfare – from 2011 contains 20 objectives targeted at improving e.g. well-being, gender equality, education and the climate and environment friendliness. It has formed the basis for the Icelandic government’s policy-making and planning in specific areas in recent years.30

In the preparation phase for Agenda 2030 Iceland actively promoted key areas such as the sustainable utilisation of land and marine resources, gender equality, renewable energy, co-operation around migration, and health issues.31

1.4.2 Timeline

The past, present and future activities and the milestones of national implementation are presented in the table below.

1.4.3 Governance structure for Agenda 2030 and stakeholder participation

The Icelandic model builds on the involvement of the whole Government in the implementation of the SDGs. Analyses and implementation will be led by the Prime Minister’s Office, in close co-operation with the Ministry of Foreign Affairs.

To attain policy coherence regarding the 17 goals and the 169 targets, the Prime Minister’s office in co-operation with the Ministry of Foreign Affairs, has decided to use the Policy Profession Board, where all Ministries are represented, as a venue to maximize policy coherence. Furthermore, the team from the Prime Minister’s Office and the Ministry of Foreign Affairs will regularly have status meetings with a ministerial committee for policy coherence where the ministers will be briefed and political decisions taken on how to proceed with the national work on the SDGs.

Civil Society

There is in Iceland, as yet, no formal structure in terms of involving other stakeholders outside the governmental offices, but these bodies will be considered and given a role in the implementation plan and review process.

The Prime minister’s Office has a co-operation agreement with the national UN organisations in Iceland with e.g. campaigns raising public awareness while other ministries have co-operation agreements with NGO’s in their respective policy areas.

---

32 All information based on interviews.
Iceland is a part of the United Nations University with the following training programmes for experts from developing countries: Fisheries, Land Degradation and Sustainable Land use, Geothermal Energy and Gender Equality.\(^{33}\) These areas are all highly relevant for the implementation of the SDGs.

**Private Sector**
The private sector has been closely involved in the bioeconomy development field, particularly in blue bioeconomy research and in the SDG work related to life in water and sustainable consumption and production.

### 1.4.4 Existing and planned action plans

Iceland is currently at the stage of gathering and analysing information to use as a basis upon which to decide on its priorities for both the national and international developmental implementation of the SDGs. The political status report prepared during the autumn 2016, has included extensive work on the analysis and the prioritising of goals, targets and indicators in respect of Agenda 2030 to form the base for Iceland’s action plan. All the ministries and the Icelandic Statistical Bureau have provided information that has been pivotal in order to draw certain baselines for all 169 targets.

Work on the status report will be finalised in March 2017, after which the country’s priorities will be decided. With the means of governance coordination heightening the probability of favourable outcome Iceland will attempt to integrate the implementation of Agenda 2030 into our 100 policies for expenditure areas in the nation’s fiscal policy. This connection provides, it is hoped, the required level of international and national coordination and perspective by linking SDG implementation to the national policy framework.

Other relevant policies which link to the SDGs are:\(^{34}\)

---

\(^{33}\) [https://unu.edu/about/unu-system/ftp-gtp-lrt#location](https://unu.edu/about/unu-system/ftp-gtp-lrt#location)

\(^{34}\) [http://www.government.is/](http://www.government.is/); interviews
• New legislation on public finances.
• A revised Development Cooperation Policy, prepared by the Ministry of Foreign Affairs, will integrate the SDGs into Iceland’s development co-operation policy.
• Revised action plan on immigration, including a section on refugees coming to Iceland.
• Revised action plan on gender equality (September 2016).
• National action plan for climate initiatives.
• New legislation on nature conservation.
• Equal Pay standard.\textsuperscript{35}
• Iceland’s bioeconomy policy has recently been finalised and discussed in government and with stakeholders, industries, educational sectors, association of fishermen etc., putting a strong emphasis both on international co-operation (e.g. in marine resources) and sustainable development of the domestic regions.
• On the municipal level, the City of Reykjavik’s climate policy\textsuperscript{36} has been used internationally as a best practice case.

The Prime Minister’s Office works in close collaboration with Statistics Iceland\textsuperscript{37} on indicators for following up SDG attainment.

\textbf{1.4.5 \textit{International engagement}}

Iceland is an active member of the UN and participates in both UN and OECD meetings on the SDGs. Iceland aims to present a national review to the UN in 2018.

Iceland is committed to contributing to the work done by developing countries on the SDGs, especially the Least Developed countries, SIDS (Small Islands Developing States), and other countries defined by the OECD DAC as those countries most in need. The new draft Policy on International Development Cooperation 2017–

\textsuperscript{35} The Equal-Pay-Management System - Requirements and guidance published in 2012 and in the 2014 regulation 929/2014 was set by the Minister of Social Affairs and Housing on the Equal-Pay-System Certification for companies and institutions, modelled on international standards. (The Icelandic Equal Pay Management System ÍST 85:2012).

\textsuperscript{36} City of Reykjavik, http://reykjavik.is/en

\textsuperscript{37} Statistics Iceland, www.hagstofa.is
2021, to be presented to Parliament for adoption in the autumn 2016, is strongly guided by the SDGs.\textsuperscript{38}

Iceland is also actively engaged in Nordic Cooperation, Baltic Sea Cooperation and Arctic Cooperation, promoting issues related to Agenda 2030.

\subsection*{1.4.6 Communication strategy}

Although the Icelandic model ultimately places responsibility for SDG implementation on the national government, there is broad consensus that it will take all of the society working together to attain the goals set. There is as yet no communication strategy in development, though the Ministry of Foreign affairs does have an agreement with the UN association in Iceland which will probably be one of the channels for public engagement.

Although no formal strategy or channels for communicating the SDGs currently exist Iceland can however boast a number of examples of successful campaigns of relevance in respect of SDG implementation. One such example here relates to the association of UN women, particularly strong in Iceland, and its Iceland HeforShe campaign\textsuperscript{39} which has gained vast national and international visibility.

One example of awareness-raising is the translation to Icelandic of the UNDP electronic book “Verður heimurinn betri?” (Is the world turning better?), which was published in 2012 (on the Millennium goals) for use in all primary and secondary schools.\textsuperscript{40} Similar campaigns can be implemented through the co-operation with the National UN organisations in Iceland.

\subsection*{1.4.7 Opportunities and challenges}

The main challenge identified by the governmental stakeholders is the lack of governance networks combined with the small resources for coordinating the work, which makes the organisation very dependent on a few persons and thus vulnerable to losing key personnel. A more general challenge, which is common to all of the Nordic countries, was seen in the sector-oriented governmental structure, which makes it

\textsuperscript{38} Based on the interviews with government officials.
\textsuperscript{39} HefosShe campaign, report 28 June 2016.
\textsuperscript{40} The national UN organisations http.un.is
challenging to implement horizontal priorities like the SDGs. Potential value was seen in the possibility of looking at the solutions that have been adopted in the neighbouring Nordic countries when building an implementation structure.

Opportunities were also to be found in the small size of the administration as it promotes greater flexibility and the smooth implementation of fast-track activities. Most importantly, the political will to be an active part of the global society and implement joint obligations in accordance with international goals creates a good grounding for the work in the coming years.

As the government has not yet prioritised the goals and actions to be implemented, it is still quite early in terms of defining Iceland’s national priorities. However, according to existing policy documents and issues raised by non-governmental organisations, potential themes of interest are likely to be found in the utilisation of marine resources, in renewable energy, in gender equality (where Iceland already scores positively in international comparisons), in enhancing living conditions and the well-being of functionally disabled and elderly people and in ensuring quality education, particularly for immigrant children.

1.5 Norway

1.5.1 Introduction and background

Norway is ranked as the third most sustainable country in the world on the SDSN SDG Index, with the same ranking on the SDG Index specifically for OECD countries (Sachs et al., 2016). With a key role in the Brundtland Commission and Rio Summit in 1992, a national sustainable strategy was launched in 2002 and was followed up by an action plan in 2003.

Norway was one of the first countries to present a Voluntary National Review (VNR) to the UN HLPF in July 2016. The Government of Norway considers the SDGs and Agenda 2030 to be a new global framework for international politics, requiring further work to identify measures in various policy areas (Government of Norway, 2016a:6). In starting to implement the SDGs, the Norwegian government has undertaken a gap analysis exercise to map those targets it will find challenging to meet and has chosen to work with these specifically.

Sustainable Development Action – the Nordic Way
1.5.2 Timeline

The past, present and future activities and milestones of the national implementation process are presented in the table below.

Table 4: Activities and milestones for national SDG implementation in Norway

Norway presented a Voluntary National Review (VNR) to the HLPF in July 2016 (Government of Norway, 2016a), with Prime Minister Erna Solberg leading the delegation and delivering a speech on 19 July (Government of Norway, 2016b). This speech was billed as representing the “launch pad for Norway’s implementation of the 2030 Agenda” (p. 34).

1.5.3 Governance structure for Agenda 2030 and stakeholder participation

Before the SDGs were adopted in September 2015, the Ministry for Foreign Affairs led an inter-ministerial contact group which analysed the proposed SDGs and their consequences and challenges for foreign and domestic policies (Government of Norway, 2016a).

After their adoption by the UN General Assembly, the government allocated responsibility for the 17 SDGs to 12 ministries; each ministry is fully responsible for the goal(s) assigned to it (Government of Norway, 2016a) (see Figure 4). It is to consult with other ministries involved in the follow-up on various targets under the goal concerned. Furthermore, within ministries, targets are assigned to individual units thereby spreading “ownership” of the SDGs very broadly within the government. Each ministry reports on the follow-up status for its respective goal(s) through its budget proposition,
the first draft round of which were available in October 2016 for the 2017 budget. The Ministry of Finance summarises the main points in the annual national budget bill. This procedure will ensure regular (annual) reporting, embedded in a well-established institutional framework and process that involves the ministries, the government and the parliament. Including SDG follow-up in the government budget process is seen as accountable, effective and transparent.

Mainstreaming the SDGs in national policies, plans and strategies is seen as crucial, though details were not provided at the time of the VNR (p. 34). Since then however the government has commissioned a White Paper on forward-looking international development policies and the 2030 Agenda and the SDGs is the platform on which this White Paper will stand.

It is expected that the system of ownership of goals within the ministries and targets within operational units will ensure that the SDGs are taken up broadly throughout government policies, plans and strategies (interviews).
Ministry of Finance (de facto responsibility for domestic follow-up)

National budget
SDG reporting happens through the annual budget process. Each ministry reports on its goal(s) through its own budget reporting, while the Ministry of Finance provides a synthesis of all SDG reporting in its budget chapter.

Ministry of Labour and Social Affairs
Ministry of Agriculture and Food
Ministry of Health and Care Services
Ministry of Education and Research
Ministry of Children and Equality
Ministry of Climate and Environment
Ministry of Petroleum and Energy
Ministry of Trade, Industry and Fisheries
Ministry of Local Government and Modernisation
Ministry of Justice and Public Security
Ministry of Foreign Affairs (Responsible for international follow-up)

Source: Stockholm Environment Institute.

Figure 4: "Ownership" of the SDGs is divided among the ministries. The Ministry of Finance has responsibility for domestic follow-up through coordinating SDG reporting in the annual budget, as well as ownership of two goals. Coordination among ministries happens through existing formal policy channels as well as informally.
Civil society

On stakeholder engagement, the VNR states that civil society, representatives from the business community and academia are “clearly speaking with one voice” on key aspects of the Agenda (p. 34). The sum of interviews conducted with civil society actors and companies for this report however suggest a slightly more nuanced picture: while the Agenda and taking up the SDGs is widely regarded as important, there is some disagreement, notably on the relative importance of working with domestic versus international implementation of the global goals. As for future consultation and interaction, the Sámi Parliament will be involved through formal consultation mechanisms and dialogue with the line ministries, in accordance with the general agreement from 2005 (Government of Norway, 2016a). Existing mechanisms for cooperation with local and regional authorities (represented in the KS association), agreed in 2000, will be used. These mechanisms include discussion of financial issues and assessment of the cost of policy reforms. The government further states that it will continue to benefit from consultations with stakeholders in the SDG follow-up process, though there is no formal consultation process planned – this is currently pursued through individual ministries with respect to the goals for which they have responsibility. Specific examples of stakeholder interaction mentioned in the VNR include an SDG leadership seminar organised by the Ministry for Foreign Affairs, Yara, the Confederation of Norwegian Enterprise and the civil society umbrella organisation, ForUM in June 2016 attended by the business community and civil society. ForUM issued a report in May 2016 on how Norway can attain the SDGs which will be updated annually with a focus on the priority goals of the HLPF for that year.

Private sector

A number of information exchanges have also been established between the ministries and the Norwegian private sector – notably there was corporate representation on the Norwegian delegation to the HLPF. As for collaboration between individual ministries and the private sector, this happens on a sector-by-sector and issue-by-issue basis. For instance, the Ministry of Foreign Affairs has long coordinated the corporate social responsibility agenda, while the Ministry for Health hosts a round table together with relevant companies to create, monitor and maintain standards for health and nutrition.
1.5.4 Existing and planned action plans

Recognising its high ranking on various international SDG indices, Norway has identified a number of challenges for domestic implementation (Government of Norway, 2016a). A list of targets identified as especially challenging for Norway was compiled. Each coordinating ministry provided input on its respective goal(s) to the VNR presented at HLPF 2016. A summary and discussion around challenging targets under each SDG is provided in the VNR.

Targets that are seen as a likely focus of policy development and political attention relate to: sustainable consumption and production, health and education, equality, employment and migration. The government is prioritising quality education and employment, especially for young people and those at risk of marginalisation. Challenges that have been identified at the national level include:

- Reducing non-communicable diseases and promoting mental health.
- Increasing high-school completion rates.
- Eliminating all forms of violence against women and girls.
- Reducing the proportion of young people not in employment, education or training.
- Ensuring sustainable infrastructure.
- Sustaining income growth of the bottom 40% of the population at a rate higher than the national average.
- Improving urban air quality.
- Halving food waste and reducing waste generation.
- Reducing the impact of invasive alien species.
- Reducing all forms of violence and related death rates and combating organised crime.

In the VNR, Norway discusses the targets under each SDG and the extent to which they are met or pose challenges. Existing policies and measures are mentioned, both those that are part of the current government’s core political platform (e.g., welfare policies that aim to reduce income inequality) and those that are more specific initiatives (e.g., a three-year strategy for child poverty).
Under each goal, Norway reports both on the domestic setting and its international engagement in the goal area.

New actions that are mentioned in the VNR build on existing work but are linked to the Agenda 2030 framing:

- An action plan on healthy diets (target 2.2).
- A white paper on agricultural policy in 2017, including climate policy aspects (target 2.4).
- The Directorate of Health has been given a coordinating role in respect of SDG follow-up including coordination with other policy areas.
- Present a new action plan for reduced violence in close relationships and addressing the needs of children who have been subjected to violence and abuse (under goal 5).
- Sign an agreement to reduce food waste in the food supply chain with partners, in 2016 (under goal 12).

Regarding indicators for Agenda 2030 follow-up, Norway welcomes the IEAG proposal and will be part of the continued development process (Government of Norway, 2016a, p. 34). It will start to adapt the indicators that are most relevant for the national context in Norway, as well as defining indicators of its own. It already has a system for environmental indicators in place that is linked to various international initiatives and organisations (including the Nordic Council of Ministers). Norway collects substantial relevant data already and this will be built upon further (interviews). Statistics Norway is engaged with IAEG-SDGs through the Swedish representation on behalf of the Nordic countries. A closer contact with OECD statistical resources has also been initiated to look into possible further use of the methodology in the pilot study (OECD, 2016b). The SDGs present challenges for measurability in accordance with sound methods for official statistics. It will be a cumbersome process to ascertain to what extent viable data can be extracted for the global reporting.

Action is also being taken beyond government. The Norwegian Children and Youth Council has published a report that aims to make the SDGs relevant to the work of youth organisations and has requested national funds to develop this work further both domestically and internationally (LNU 2016). The umbrella organisation for a large number of NGOs, ForUM, has also worked on making the goals relevant to the Norwegian
NGO sector (ForUM 2016). Many larger corporations in Norway are approaching the SDGs through the Global Compact’s Nordic Network as well as through sector associations. Examples of the integration of the SDGs into business plan can also be found – for instance, the Norwegian multinational Orkla joined other Global Compact companies to map its existing sustainability strategy onto the SDGs in order to understand and pursue its business activities in an SDG-supportive manner (Orkla, 2016).

1.5.5 **International engagement**

Examples of Norwegian priorities and partnerships in its international work on Agenda 2030 include (Government of Norway, 2016a):

- Increasing ODA for education, with a special focus on girls’ education, education in emergencies and education quality.
- Maintaining a high level of investments in global health, in particular efforts to improve maternal health and reduce child mortality.
- Working in partnerships, including with the private sector, Every Woman Every Child, the vaccine alliance GAVI, and the Global Partnership on Education (GPE).
- Engaging in partnerships under the UN, World Bank and other organisations to strengthen women’s rights and gender equality in economic, social and political life, which is crucial for economic development and growth.

Further priority areas mentioned in the VNR include climate change mitigation and adaptation, oceans and the marine environment, and peace and conflict prevention (SDG 16) (Government of Norway, 2016a).

Human rights and non-discrimination is another priority area. As stated in the VNR, Norway looks forward to seeing how the Universal Periodic Review, under the UN Human Rights Council, can complement and reinforce reporting under Agenda 2030 (Government of Norway, 2016a).

Numerous international initiatives and alliances, of which Norway either leads or is a part, and which directly or indirectly support the implementation of Agenda 2030, are also mentioned in the VNR.

Norway is home to many development co-operation NGOs which are starting to understand their operations and mandate in the context of the SDGs. Furthermore, in
its report *1,8 milliarder grunner* (1.8 million reasons), the LNU has made a request for a budget line in the budget to allow youth organisations in Norway to collaborate internationally (as well as domestically) on youth as drivers of the SDGs (LNU 2016).

### 1.5.6 Communication strategy

In order to maintain a high level of popular engagement with the SDGs, Norway intends to continue to promote informed debates and information sharing across all available platforms (Government of Norway, 2016a). The Ministry of Education has recommended that the SDGs shall be included in school curricula while several state-supported NGOs already make SDG tools available for the classroom.

Prime Minister Erna Solberg is Co-Chair of the SDG Advocates group, appointed by the UN Secretary General in January 2016 and mandated to be the 17 public faces of the UN campaign to deliver the SDGs.

In Norway, progress on the SDGs is reported through the annual budget. Starting with the 2017 budget, presented first in draft form on 6 October 2016 (Nasjonalbudsjettet 2017, 2016), each ministry reports progress on the goal(s) for which it has responsibility, while the Ministry of Finance has responsibility to summarise them (Nasjonalbudsjettet 2017, chapter 7).

Additionally, umbrella civil society organisations such as ForUM and the Norwegian Children’s and Youth Council (LNU) are placing emphasis on awareness-raising among their members. LNU has a staff person dedicated to Agenda 2030 while the ForUM report mentioned above will be updated each year.

### 1.5.7 Opportunities and challenges

Civil society’s view on the 2016 HLPF reporting undertaken by Norway was that, while the process was open to civil society dialogue and feedback, the actual period for consultation was very brief due to the limited time frame. As a result, the report mainly reported on already ongoing activities, and not new activities spurred by Agenda 2030 (Halkjaer, 2016). So while Norway saw an opportunity to report early, the process was more about translating current activities into the “shape” of Agenda 2030 than about featuring Agenda 2030-specific action. Future reporting to the HLPF will focus on the subset of individual goals on the HLPF agenda, thereby offering opportunities for the
ministries, civil society and the private sector concerned with those goals to concentrate their efforts further.

While from a global perspective, Norway is comparatively advanced in implementing the SDGs and their targets, it shares with the other Nordic countries the challenge of understanding the goals in its national context. Whether a goal or target is achieved will always bare an element of subjectivity. How, for instance, is the target “climate concerns shall be incorporated in the sectors” to be understood in the context of large agricultural, forestry, mineral and oil sectors? An opportunity therefore exists for experience sharing to occur in respect of these challenges with a view to better addressing them. Finding the balance between “we’ve come a long way” and “we can still do more” is a potential Nordic and/or OECD conversation that still needs to be had. Co-developing indicators, benchmarks or incentives for assessing and pursuing “achievement” on these types of issues where a country is a global leader but can still raise the bar even higher presents something of a related opportunity here.

Various actors in Norway observed that a national challenge had been set in the need to rethink and recalibrate the North-South dichotomy when approaching the SDGs. As the successors to the Millennium Development Goals, it is not surprising that the SDGs were initially approached in the same manner; namely, with a development co-operation mindset. For instance, the initial Norwegian SDG priorities in the negotiation phase aligned with issues high on Norway’s development agenda such as education and health. Since then however, the universality of the goals appears to have been better understood on an institutional level in Norway. This could provide an opportunity for new types of partnership such as collaboration between the private sector and government in the form of Public Private Partnerships in countries that are not currently prioritised in the development co-operation agenda as has conventionally been the case.

Civil society, the private sector and government itself have all expressed support for the Norwegian model of goal ownership within different ministries: it is effective and pragmatic to build on existing work and to spread SDG responsibility broadly throughout the government. The flip side is, of course, is the challenge this poses when working at the nexus of multiple sustainability topics that are “housed” in different ministries. Multiple interviewees thus viewed the SDGs as an opportunity to form a bridge between ministries in order to increase communication and collaboration and ultimately to draw a more complete picture in terms of sustainable development policy in Norway.
1.6 Sweden

1.6.1 Introduction and background

Sweden is ranked the most sustainable country in the world on the SDSN SDG Index, with the same ranking on the SDG Index specifically for OECD countries (Sachs et al., 2016). After the Rio Earth Summit in 1992, work on Local Agenda 21 was actively conducted in Sweden and left a lasting legacy of sustainable development initiatives and strategies at the local level. For the Johannesburg summit ten years later, Sweden produced its first national sustainable development strategy. A revised version was produced in 2004. An effort was then made to reorganise government ministries, with a Ministry of Sustainable Development (“Miljö- och samhällsbyggnadsdepartementet”) created in 2005. It was later dissolved, but commitment to sustainable development was clear in the sixteen national environmental quality objectives for Sweden, the policy for global development, in mainstreaming the climate policy agenda, and in other policy areas – particularly in the field of gender equality.

Specific Swedish priorities during the SDG negotiations included sexual and reproductive health and rights (SRHR) and gender equality (Weitz, 2016). The issue of climate change has also been highlighted in this respect on various occasions. During the negotiations, a group of major Swedish companies (see SLSD below) collaborated with the Swedish government to reflect their collective priorities for the goals: decent work, environment and climate change, and anti-corruption. In March 2016, the Swedish government confirmed that its primary ambition is “for Sweden to be a leader in the implementation of the 2030 Agenda” (Government of Sweden, 2016a).

1.6.2 Timeline

The past, present and future activities and milestones of national SDG implementation are presented in the table below.
Table 5: Activities and milestones for national SDG implementation in Sweden

<table>
<thead>
<tr>
<th>Schedule</th>
<th>Milestones</th>
</tr>
</thead>
<tbody>
<tr>
<td>2014–15</td>
<td>Ministry of Foreign Affairs led an inter-ministerial contact group which analysed the proposed SDGs, their consequences and the challenges they pose for foreign and domestic policies.</td>

</tr>
<tr>
<td>2019</td>
<td>March: The Delegation’s mandate comes to an end.</td>
</tr>
</tbody>
</table>

To date, the focus has been on internal organisation and designing structures and processes for the government’s implementation of Agenda 2030. A guiding principle here is policy integration and coherence in order to ensure that follow-up is embedded in existing policy areas and sectoral ministries. As for priority issues, opportunities and challenges relating to the SDGs and their targets, it is to be expected that the Delegation (see below) will address those later this year and early next year.

Sweden plans to present a Voluntary National Review to the UN HLPF in 2017.

1.6.3 Governance structure for Agenda 2030 and stakeholder participation

When Agenda 2030 was adopted in 2015, the government announced that the Agenda is the responsibility of the whole of government and the cabinet in particular. However, two ministers were given special responsibility: the Minister for Public Administration (located at the Ministry of Finance) for national implementation, and the Minister for Development Cooperation and Climate (located at the Ministry for Foreign Affairs; currently also Deputy Prime Minister) for international aspects. Until May 2016 and before the government was restructured, the Minister for Strategic Development and Nordic Cooperation (located at the Prime Minister’s Office) was the third minister with such a special responsibility.
Agenda 2030 has tapped into and further strengthened inter-ministerial collaboration. An interdepartmental working group (IDA) has been set up for Agenda 2030. In addition, a smaller working group led by the state secretaries from the two ministries with special responsibility the SDG, as well as from the Ministry of Environment and Energy, has also been set up.

Agenda 2030 has also become the key topic for the inter-ministerial working group responsible for global development. The Policy for Global Development, adopted in 2003, led to a structured process ensuring policy coherence and involving other ministries in the taking of responsibility for global development outcomes. This process was re-launched by the current government, in parallel with revising the Policy for Global Development and Development Cooperation. In 2015 and 2016, participating ministries prepared their own action plans for policy coherence for development, which focused on various targets under the SDGs. The government provided a synthesis to Parliament in May 2016 in its biannual report on the policy for global development (Regeringens skrivelse 2015/16:182).

As a specific initiative to implement Agenda 2030, in March 2016 the government appointed an independent national committee for the implementation of Agenda 2030 (the Delegation) (Government of Sweden, 2016a; Regeringen, 2016). The Delegation consists of seven individuals representing different areas of expertise and different stakeholder communities (business, academia, civil society, public sector), supported by a secretariat outside the government’s offices. It is tasked with producing a proposal for an overarching action plan for Sweden’s implementation of the 2030 Agenda, including national and international perspectives and commitments, to the government. The action plan is expected to build, to the extent possible, on already adopted objectives, strategies and action plans of relevance (interviews). The Delegation’s work and government work on the SDG Agenda are taking place in parallel, with formal coordination happening between the Delegation’s secretariat and the Ministries of Finance and Foreign Affairs, as well as frequent, “less formal” communication. In November 2016, the Delegation proposed a revised time plan, in order to increase the time available for consultation with sectors and stakeholders. It suggested that an initial overview action plan should be presented by 31 May 2017, and that this should be followed up with more detailed versions in 2018 and 2019.

In April 2016, 86 central government agencies were instructed by the government to assess how their operations affect Agenda 2030 and what additional measures may
be required (Finansdepartementet, 2016). These were reported at the end of August 2016 and will inform both the government’s and the Delegation’s work.

The Scientific Council for Sustainable Development, established and appointed by the government in 2015 to provide scientific assessment and advice, has also engaged with Agenda 2030, by organising seminars and synthesising knowledge.

Civil society
During the SDG negotiation phase the Ministry for Foreign Affairs was in charge and led the inter-ministerial work and dialogue. It also ran several consultations in early 2015, organised by SDGs (individual or clustered) with invited stakeholders, representing business, civil society and academia.

In January 2016, a major “kick-off” event was held for and with stakeholders where ministers laid out some visions. Non-government stakeholders were also included in the official government delegation to the UN negotiations (Bexell & Jönsson, 2016). These individuals represented the private sector, civil society, and academia.

Since the advent of the SDGs, CSOs in Sweden have been more active on the international rather than on the domestic level in terms of advocacy. Smaller educational CSOs at the grassroots level have not however begun to align their work and do not as yet see it as a priority. For instance, there is no comparable SDG Watch set up (as is the case in Finland).

Concord Sweden is a prominent Swedish actor in the SDG advocacy and implementation field with significant outreach through their member organisations throughout the country. It provides a platform for 59 CSOs in Sweden, and is one of 28 national platforms in Concord Europe bringing together 2400 CSOs across Europe. A number of its partners have already integrated the SDGs into their work and the intention here is that they can work to inspire other CSOs to follow suit. During October 2016, Concord Sweden prepared a response to the government on using the Policy for Global Development as an instrument to assess and measure SDG implementation and facilitated a seminar attended by government representatives and civil society actors.

The report, Champions to Be, outlines the level of international engagement on the civil society level in the same grouping of countries as in the informal High Level Group initiated by Sweden in 2015. The emphasis here is on assessing what countries have achieved thus far and what they need to do to make progress towards SDG attainment. On the sub-national level within the municipalities, Concord Sweden – as well as the Swedish UN Association – collaborates closely with the Swedish Association of Local
Authorities and Regions (SKL) through the organising of seminars and information sharing on Agenda 2030.

**Private sector**
The Swedish Leadership for Sustainable Development (SLSD) group is comprised of just over 20 of Sweden’s largest companies, a few research entities and is convened by Sida. The SLSD formed in 2013 when the SDGs were still being negotiated. The companies saw Agenda 2030 as an opportunity to further their own sustainability plans and guard against future risk. These companies have prioritised sustainability issues which they see as essential for the resilience of their own work in a global context including, decent work, climate change and corruption. The SLSD continues to work together on information sharing and best practices, implementing projects and engaging in Public Private Partnerships in line with stated global goals. Moreover, it aims to potentially be an inspiration to private sector peers and other development agencies interested in comparable partnerships.

### 1.6.4 Existing and planned action plans

As noted above, the Delegation’s work is currently ongoing and is designed to result in the production of overarching national action plan to be proposed in March 2017 and considered by the government at that time. The Delegation will reach out to umbrella organisations in many sectors, serving both an awareness-raising and idea-collecting purpose (interviews).

Among the government’s priorities, agreed in September 2016 in the lead up to COP21 in Paris and with clear relevance for the 2030 Agenda, is to deliver on its commitment to become one of the “the first fossil-free welfare states”.

An independent, external assessment of Sweden’s domestic implementation challenges was presented in September 2015 by the Stockholm Environment Institute (Weitz *et al.*, 2015). It suggested that over 70 of the SDG targets could not be considered fully achieved within or by Sweden. A strong message of the report was that the SDGs and targets are so vaguely defined that a national interpretation and redefinition process is essential, in all countries. This work is being followed up in 2016 and 2017 with a study on how SDG targets interact (in both positive and negative ways), with Sweden as a case study.
In Sweden, much of the existing implementation work on the environment is undertaken at the local level – and this will also be true for domestic action on Agenda 2030. In part through SKL, counties and municipalities are beginning to look at ways in which to better understand their own activities in an SDG context. Pending the results of an application made for funds, SKL and the UN Association in Sweden plan an awareness-raising tour to inform and engage municipalities in mapping their work to the SDGs (interviews).

With respect to indicators and reporting, Sweden and Norway share similar challenges. One such challenge being how to manage the indicators: *how* and *what* to measure, distilling and amending the information available and determining what next steps to take. Sweden, through Statistics Sweden, is a member of the Inter Agency Expert Group on Sustainable Development Goal Indicators (IAEG-SDG), which proposed global SDG indicators to the UN Statistical Commission in March 2016 and will refine this proposal in 2017. It is yet unclear if and how complementary national indicators for Sweden are to be developed.

### 1.6.5 International engagement

Regarding the global development dimension of Agenda 2030, the government has developed several areas of focus, among them: peace, democracy and human rights; gender equality, empowerment and sexual and reproductive rights; decent work; and climate change mitigation and adaptation. According to Sida, other Swedish priority issues include the green economy and illicit financial flows (Sida, 2016).

Since the adoption of the Agenda in September 2015, Sweden has been one of the driving forces behind the informal “High-Level Group in support of the implementation of the 2030 Agenda”, together with countries such as Germany, Brazil, Liberia, and South Africa (Government of Sweden, 2016b). This High-Level Group has not however been particularly visible since it issued a joint-statement (High-Level Group, 2016) in April, 2016.

Three further specific international initiatives can be mentioned in the SDG context:

- Sweden and Fiji have launched an initiative to protect the oceans and achieve SDG 14.
Sweden has initiated a Global Deal for Decent Work and Inclusive Growth, a multi-stakeholder partnership to achieve SDG 8.

Sweden is a “pathfinder country” in the Global Partnership to End Violence against Children, focusing on SDG 16.2.

Further, in 2016 Sweden was elected onto the UN Security Council. Much of its campaign platform centred on 2030.

1.6.6 Communication strategy

At the international level, Sweden, led by the Ministry for Foreign Affairs and the Embassies, has launched an international awareness and engagement campaign around Agenda 2030, #FirstGeneration (Ministry for Foreign Affairs, 2017). It targets young people specifically and employs digital diplomacy tools. Further, Crown Princess Victoria is a member of the UN SDG Advocates group.

Domestically, Sida is responsible for communicating the SDGs to the Swedish public. It has announced competitive grants for communication projects around the SDGs on its website (Sida, 2016), and also hosts seminars on Agenda 2030. The Delegation also has an outreach mandate and implicitly communicates Agenda 2030 through its engagement with the broader public. Furthermore, the Delegation secretariat plans a communication function once the Delegation has completed more of its work.

SKL’s work to engage its member municipalities and counties is described above. The Swedish Youth Council, LSU, has organised two events for its members called Unga och Agenda 2030 to help youth in Sweden understand Agenda 2030, discuss what links can be made to the existing work of youth organisations in Sweden and how to encourage youth engagement with the SDGs globally.42

42 See http://lsu.se/youth-agenda-2030/
1.6.7  Opportunities and challenges

Sweden and its Nordic peers are in good company in facing the challenge of understanding the SDGs in a national context. This means both mapping existing national sustainable development plans, measurements and other aspiration onto the SDG Agenda and finding appropriate levels of ambition when establishing baselines and goals relating to what SDG attainment and targets means for Sweden.

Beyond MPs with a personal interest in Agenda 2030, the Swedish process has not thus far involved the Parliament to any great extent (Bexell and Jönsson, 2016). Civil society has also called for deeper engagement with the Parliament (Halkjaer, 2016), so this is an obvious venue for increased engagement on Agenda 2030.

The unique mandate and role of the Delegation to pursue implementation of Agenda 2030 in close contact with, yet at arm’s length to and in parallel with the government, presents both opportunities and challenges. In terms of mandate, the Delegation has a tall order with a large workload, tight schedule, and high pressure with the direction of the national implementation plan hinging on the Delegation’s report. At the same time, the broad consultation process planned to achieve the goals outlined in this report will ensure the involvement of and, hopefully, therefore the uptake of implementation work, by a broad group of actors. The composition of the Delegation – high profile individuals from many sectors – also facilitates robust outreach to different sets of actors across the country, but also opens the door to critique: the Delegation’s representativeness has been questioned by both civil society and the private sector for their perceived insufficient focus on international development, their excessive representation of the environmental dimension of sustainable development and the lack of emphasis on private sector interests. This makes it all the more important that the Delegation’s consultation process be as broad and as engaging as possible as regards the various relevant sectors. Logistically, the model used here, with the Delegation’s work being carried out in parallel to ongoing government implementation activities, is pragmatic, but this makes the work of those with coordination functions – namely in the Delegation secretariat and the government offices – all the more important.

Since substantial work on sustainable development in Sweden has been ongoing with some success for many years it is clearly a challenge to help actors at all levels to understand their existing work as part of and not in addition to the SDGs. Some interviewees noted the risk that Agenda 2030 will be pushed aside by those sectors, organisations and individuals who are actually leading in sustainable development as...
“yet another thing on the to-do list”. Agenda 2030 as a framework in which to understand ongoing work is, in this way, a communication and mapping challenge. To illustrate, at the national level, Sweden’s existing sustainable development goals must be mapped to the SDGs. As such, local actors like the municipalities are extremely important in terms of domestic implementation and must also be facilitated in understanding their work as it relates to the SDGs – while at the same time they should not, by convention and notions of subsidiarity be overly “steered” from the national level. Creating the right dialogue and support for and between different levels of implementation is part of Sweden’s domestic challenge.

Through the SLSD, the SDGs have been an opportunity for Swedish companies from diverse sectors to collaborate. In addition to finding learning and implementation activities in common in the pursuit of the SDGs, a level of trust has been built between these companies that transcends their sustainability work. The SLSD model is unique and opportunities exist to export this flavour of collaboration – as some Norwegian and Danish actors are already contemplating.

1.7 Faroe Islands

1.7.1 Introduction and background

The Faroe Islands recognise sustainable development to be a responsibility shared with its neighbours and the rest of the world. The UN sustainable development goals as well as other international agreements on sustainable development are today an integral part of Faroese domestic and international policies.43

1.7.2 Timeline

The coalition programme of the Faroese government, adopted in September 2015, underlines the responsibility to engage and take an active part in global development44

43 In the UN, the Faroe Islands is covered by the Danish representation.
in close co-operation with the various international fora of which the Faroes are a part and particularly within the context of Nordic co-operation.

1.7.3 Governance structure for Agenda 2030 and stakeholder participation

The Ministry of Foreign Affairs is currently investigating the various possibilities for a governance structure as well as stakeholder participation in a national implementation action plan for Agenda 2030.

1.7.4 Existing and planned action plans

The national implementation action plan will rely on a mapping and gaps analysis but the initial suggestion is that the implementation of the SDGs will be integrated with existing and planned action plans for sustainable development within prioritised policy areas.

1.7.5 International engagement

The ODA budget has been substantially increased to its highest level thus far. In line with the UN development goals the priorities are education with a particular focus on girls’ education and health with reference to maternal health and to reducing child mortality. Being an island nation with a great dependency on the sea and its resources and with expertise accumulated over many decades, programmes to support the sustainable use of the sea and its resources represent a natural priority for Faroese development co-operation, both current and ongoing (SDG 14).

The Faroe Islands work in close co-operation with both governmental and non-governmental partners on sustainable development. In terms of humanitarian aid, international organisations are partners of great importance to the Faroese engagement in sustainable development work abroad.

1.7.6 Communication strategy

See section 2, no specific communication strategy is currently in place.
1.7.7 Opportunities and challenges

In the coalition programme from September 2015 the government has highlighted the central sustainable development challenges that will be addressed in its term in office. Tackling inequality and uneven demographic age structures, presenting a new sustainable fisheries reform and investing in the environment with revised climate and green energy policies to make the Faroes energy self-sufficient with renewables is highly prioritised “work in progress” as is the promotion of sustainable tourism.

For the Faroe Islands, co-operation and the exchange of experiences with the other Nordic countries is considered highly valuable both on the national and the municipal levels.

1.8 Greenland

1.8.1 Introduction and background

Greenland is actively involved in various international fora at the UN and EU levels as well playing an important role in Arctic co-operation and in the Nordic co-operation effort on sustainable development.\(^\text{45}\) A specific priority for Greenland however is the cultural dimension, which in national level policies has been added to the three traditional sustainable development dimensions: economic, environmental, and social.

1.8.2 Timeline

In September 2016 Greenland’s government adopted a new national plan for sustainability and growth. Its main vision is gradually to develop the economic independence and sustainability of Greenlandic society. Although it is not as such a plan for implementing the 2030 Agenda, it is closely linked to several SDGs and direct references are made in the comprehensive document to the 2030 Agenda and to specific SDGs, as well as to Nordic co-operation.\(^\text{46}\)

\(^{45}\) In the UN, Greenland is covered by the Danish representation.

Greenland’s implementation of Agenda 2030 will include a systematic mapping on the national level of the work being done in a number of different sectors. The sustainability and growth plan is intended to be implemented in connection with the work with sector plans in Greenland (Government of Greenland 2016b) and will be closely linked to the allocation and follow up of state finances (interviews).

1.8.3 Governance structure for Agenda 2030 and stakeholder participation

Responsibility for following up on the sustainability and growth plan has recently been moved to the Ministry of Finance. The Ministry of Finance will thus have primary responsibility for leading both the implementation itself and the follow-up of the plan.

1.8.4 Existing and planned action plans

The National sustainability and growth plan consists of four major areas of reform: 1) raising the level of education; 2) developing Greenland into a more diversified economy (e.g. sustainable tourism); 3) modernising the public sector; and 4) securing the welfare society of the future. The cross cutting aspects of the plan are sustainability, increased self-sustainability, creating stable frameworks for private investments, taking a holistic and efficient approach, and developing the attractiveness of Greenland as a place for living and societal engagement.

The indicator work will be done in close collaboration with Greenland Statistics,47 organised under the Ministry of Finance.

1.8.5 International engagement

Greenland is actively participating in several UN fora (such as CBD, UNFCCC and UNESCO) as well as in European co-operation e.g., through a fisheries agreement with the EU and co-operation agreement with the European Environment Agency. Greenland also plays a central role in Arctic co-operation and in work for the sustainable development of the Arctic. Greenland also actively participates in all sectors of Nordic co-operation.

47 Grønlands Statistik: http://www.stat.gl
1.8.6 Communication strategy

There are, currently, no specific channels or fora for communicating sustainable development goals in Greenland. The Government is working on a mapping of Greenland’s implementation of the SDGs, visualised in fact sheets on each SDG and its status in Greenland. The mapping exercise will be the main tool for knowledge sharing within the government and for dissemination across the various societal sectors in Greenland. Mapping could also be used for international communication purposes (if translated).

1.8.7 Opportunities and challenges

According to the interviews, one of the main internal challenges is simply raising awareness of the SDGs within Greenlandic society. In external co-operation, the growing role of Greenland as a central Arctic community on the global scene, is one of the main challenges faced but also represents something of an opportunity to promote the greater visibility of Greenland’s specific views on these matters.

1.9 Åland

1.9.1 Introduction and background

Sustainable development has played an important role in the development of business and entrepreneurship in Åland as well as in civil society engagement more broadly. Åland has been particularly active in implementing the Agenda 2030 goals on both the municipal and the government level.

In the UN, Åland is covered by the Finnish representation and has a representative in Finland’s national commission for sustainable development.

\[48\] Draft mapping of SDGs: Goal 4. Education (forthcoming).
In 2014, the government decided to develop a strategy for a sustainable Åland 2015. In the wake of the UN adoption of Agenda 2030, it was decided to directly connect the Agenda for development and sustainability to the global goals and targets. The Agenda for development and sustainability was thus developed into Åland’s own SDG implementation plan.

1.9.2 Timeline
Åland organised an Open Forum for Societal Development in February 2016, where the vision and targets of the Agenda for development and sustainability were first discussed by both experts and the general public. Extensive analysis work and hearings followed the workshop with the final vision and seven targets endorsed by the Council for Development and Sustainability in June 2016. The final agenda was revealed at the second forum for societal development in September 2016, enabling the work on indicator definition to begin.

1.9.3 Governance structure for Agenda 2030 and stakeholder participation
The network bärkraft.ax is the central coordinating forum for the implementation of Åland’s agenda for development and sustainability. The network was established at the beginning of 2016 on the initiative of key players from the public sector, business, civil society and the educational sector. The open network facilitates dialogue and knowledge exchange within and between societal sectors. It operates on flexible principles and rests on the engagement of the participating people.

A Council for Development and Sustainability (utvecklings- och hållbarhetsrådet) was appointed at the beginning of 2016 with responsibility to promote the continuity and stability of the network and to follow up the implementation of the agenda. The council consists of 8–12 opinion leaders from different sectors of society, appointed by the Government of Åland for a 2-year period. The Council meets twice a year, in April/May and November/December.

49 Following the report “Omnställning Åland – Strategisk planering för en hållbar framtid 2013-2051”.
50 Nätverket bärkraft.ax. web site: www. barkraft.ax, facebook of bärkraft.ax: https://www.facebook.com/barkraft.ax/
The Open Forum for all of the residents of the Åland Islands will remain one of the main tools for strategy development and implementation and will be organised in May/June each year.

### 1.9.4 Existing and planned action plans

The Åland agenda for development and sustainability is the main document guiding future action.

The Åland agenda has seven targets, directly linked to the SDGs, including the well-being of people (SDGs 3–4), their involvement in society (SDGs 1, 2, 5, 8, 10, 16), clean waters (SDGs 6, 14), a balanced ecosystem (SDGs 14, 15), appealing to residents, visitors and entrepreneurs (8, 9, 11, 13), energy efficiency (7, 13), and sustainable consumption and production (12).

Work on defining target indicators is currently in progress and is being undertaken in co-operation with the statistical bureau of Åland.

### 1.9.5 International engagement

Åland has no representation of its own in global fora as it has no foreign policy or development policy of its own. In the Nordic co-operation context, Åland is however an active member within all sectors of co-operation including sustainability issues.

### 1.9.6 Communication strategy

The website barkraft.ax contains all the background to, and the contents of, the vision, in a more popular format. The website is the main information channel for the dissemination of information on Åland’s specific agenda.

The open Facebook page of bärkraft.ax is the main channel for public involvement (currently with >600 followers).
1.9.7  *Opportunities and challenges*

According to the interviews, work on the agenda has proceeded at a good pace while the biggest challenge currently foreseen is the need to secure the continuity and persistence of the good work already begun across all sectors of society.

1.10  *Synthesis of Nordic approaches*

The Nordic countries collectively top the charts in terms of all global sustainability rankings. The region is looked to as leading by example, sending strong signals on human rights, social and welfare levels, and continued commitments to development aid, while making important contributions to evaluation and learning methods. The Nordic countries have also led by example when it comes to processes identifying those goals and targets that will be challenging to meet.

The Nordic countries are however, perhaps with some justification seen as being fairly homogenous in how they go about pursuing these relatively aligned policies and priorities. Despite the aggregate similarities however, the eight country profiles in this chapter also demonstrate differences in governance approaches and thus also in respect of SDG implementation. Some of the main variance issues in terms of priorities and approach are summarised in Table 6.
### Table 6: Nordic approaches to SDG prioritisation and implementation

Work with developing indicators starting autumn 2016
1.10.1 Joint challenges and priorities

The Nordic countries’ position of global leadership in sustainability presents an opportunity to lead by example, both on priorities that are uncompromisingly Nordic – Nordic “trademarks” like human rights, equality, welfare society – as well as on several, if not all, of the explicit 17 goals. This Nordic leadership position results at the same time in a host of common challenges. Some of these are distilled here as candidate categories for joint work on Agenda 2030 implementation. Elaborated opportunities for collaboration are developed in greater detail in chapter 4 of this report.

A broad shared challenge facing all of the Nordic countries is to develop and understand the SDGs in a Nordic context. Starting from a comparatively high baseline and with goals and targets that often leave broad scope for interpretation, Nordic countries must decide when a target is met or not met in a global but also in a domestic context (checking against domestic priorities and expectations). This is done against the backdrop of the universal goals which require both domestic and global action: how much can and should be done at home, and what can and should be done abroad? In a globalised and highly interconnected world for example ecological and social footprints are easily “exported” to be carried by other countries and regions while climate risks are imported (Benzie, Hedlund & Carlsen 2016, and Hildén et al. 2016). An alternative framing of the same issue might raise the question whether and how “parallel” sustainable development and development co-operation agendas should be merged, managed and/or kept distinct?

A common communications and political challenge might be found in articulating priorities and accomplishments in respect of the SDGs. On the one hand, the Nordic countries are approaching the SDGs with a long tradition behind them of the pursuit of, and progress on, sustainability, onto which the SDGs can be mapped. At the same time, they must also demonstrate to a domestic constituency and to international peers that the SDGs are a policy focus and priority per se. “Bringing home” Agenda 2030 as a continuation of existing policy while at the same time demonstrating genuine and significant new efforts in respect of Agenda 2030 is thus a clear challenge for the Nordic countries.

Although, to varying degrees, most Nordic governments have already made efforts to engage broader society in the ownership of SDG implementation, while those that have not yet done so nevertheless acknowledge that the SDGs require input from all
sectors of society. The Nordic model of consultation and civil society engagement can serve as a model for partnership in the SDG context. Indeed, the sharing of practices and tools between Nordic governments and non-government actors (NGOs, the private sector, local level actors) may represent a concrete area of Nordic co-operation with a high benefit-to-resources invested ratio.
2. Nordic Cooperation and the SDGs

2.1 The Nordic strategy for Sustainable Development

The Nordic countries launched their first joint SD strategy in 2001. The fourth and current strategy, *A Good Life in a Sustainable Nordic Region: Nordic Strategy for Sustainable Development*, was adopted in 2013 and has a timeframe until 2025 (Nordic Council of Ministers, 2013). The overall objective is “for the Nordic countries to gradually develop into more sustainable welfare societies and to bring about positive changes within the foreseeable future” (Nordic Council of Ministers, 2013). Three guiding principles are identified (precautionary, polluter-pays, and substitution), emphasising the importance of indigenous peoples and the internalisation of external costs. The strategy defines five goal areas, with specific objectives and indicators under each (see Table 7; indicators analysed in the next section). The five goals and 16 objectives are expressed in a qualitative and aspirational way, rather than as quantified and measurable performance targets. This means that a comparison with the SDGs and their targets cannot include a quantified comparison of the level of ambition in different issue areas.

Table 7 below identifies which SDGs and targets are relevant to the five Nordic goal areas. This analysis concerns only the document *Nordic Strategy for Sustainable Development*, whereas other SD priorities may be addressed in other Nordic strategy and priority papers. “ Relevant” refers to targets that address similar issues. It ranges from near verbatim formulations (e.g., both sets of goals refer to the implementation of the 10-year framework programme (10YFP) on sustainable consumption and production for enhancing resource efficiency) to issues being explicitly or implicitly mentioned in both documents. For the Nordic strategy, issues and aspirations referred to in the introductory text under each of the five goal areas are also included, not just those explicitly mentioned under the “Objectives”. For this reason, it was not meaningful to compare SDG targets to the 16 objectives individually.

2.1.1 A general comparison

A general comparison shows that the SDGs, through their much greater comprehensiveness and breadth, address almost all of the goals and objectives of the Nordic Council of Ministers’ strategy for sustainable development. Being a shorter document, the Nordic strategy has fewer focus areas and is less detailed. The SDGs and the Nordic strategy both consider the economic, social and ecological dimensions to be intricately interlinked and mutually reinforcing. A major difference, though, is the character of goals. Whereas the 17 SDG goals are similar to the Nordic goal areas and objectives, they are also expressed in a qualitative and aspirational way, many (but far from all) of the 169 targets and means of implementation are outcome-oriented, quantified, and thus provide clearer benchmarks for measurement of progress (e.g., target 10.1 “by 2030, progressively achieve and sustain income growth of the bottom 40 per cent of the population at a rate higher than the national average”). Even the SDG targets that express ambitious zero visions (e.g., target 5.2 “eliminate all forms of violence against all women and girls in the public and private spheres, including trafficking and sexual and other types of exploitation”) provide – theoretical, if not realistic – benchmarks for measurement. The Nordic objectives generally however express a vision and do not specify clear targets or benchmarks (e.g., “The level of employment and the labour supply in the Nordic countries will increase”).

It should be noted here that nationally specific targets are foreseen and encouraged in the UN Resolution adopting the SDGs. For those targets that are not quantified, are very broad in their scope, and/or are ambiguously formulated, national interpretation exercises are required (Weitz, Persson et al., 2015). For an example of how qualitative targets can be quantified and converted into clear benchmarks, see the pilot OECD SDG indicator framework (OECD, 2016b).

In Figure 5, a simpler illustration of key overlap and differences in the two sets of SD goals is provided. Several observations can be made here. First, there is considerable overlap between the two strategies, suggesting a largely common understanding of issues critical to the pursuit of sustainable development. These issues range from the more value-based (e.g., equal opportunities) to more technical and instrumental (e.g., innovation and research). Both strategies emphasise the need for sustained economic growth, but also share a large focus on environmental and social dimensions.

Second, given that the SDGs are more comprehensive in scope, it is not surprising that they address a greater number of issues than are reflected in the Nordic strategy, rather than vice versa. On most of these issues, the Nordic region has reached an
advanced stage of development, rendering them less relevant. For example, many of the goals and targets relating to basic livelihoods and infrastructure have already been reached: food security, poverty reduction, safe human settlements, primary education, water and sanitation, basic health, and energy access. Similarly, on many of the issues related to good governance, human rights and equality, the Nordic region can be considered significantly more advanced. However, as illustrated by the OECD pilot indicator assessment of four Nordic countries, i) there is significant variation in performance on individual targets under a particular SDG and ii) the assessment ultimately depends on the level of ambition and benchmark value chosen.

Figure 5: Comparing the issues addressed by the SDGs vis-à-vis the Nordic strategy

Source: Stockholm Environment Institute.
2.1.2 Comparing specific issue areas

A number of key differences between the SDGs and the goals and objectives contained in the Nordic SD strategy can be highlighted.

A focus on human settlements (SDG 11) is not a specific objective in the Nordic strategy, although the urban dimension is referred to in some places, particularly in relation to viable ecosystems, urban demographics or municipal waste management. SDG 11 is more focused on safety and security and emphasises community cohesion, perhaps showing that this is largely taken for granted as a central pillar of the welfare state and not perceived to be a priority in the Nordic strategy. The focus of SDG 9 on developing safe and sustainable infrastructure (including in urban areas, many of which are rapidly growing in the developing world) cannot be found in the Nordic strategy, although the latter points to the need for increasing energy efficiency in transport and housing. Transport is explicitly excluded from the Nordic strategy because it is not an area of Nordic co-operation.

Regarding health, SDG 3 addresses a lot of basic health issues, such as maternal and child mortality, epidemics (AIDS, tuberculosis, malaria), and healthcare access, as well as sexual and reproductive health and reproductive rights (SRH-RR). The Nordic strategy instead addresses public health and preventive measures more generally, as well as concerns related to an ageing population. Both address non-communicable and chronic diseases.

Environmental quality and natural resources provide a strong focus for both strategies. The SDGs tend to cover more aspects though, such as ecosystem conservation, forest management, desertification and habitat loss, benefit sharing from genetic diversity, poaching, and alien species under SDG 15. The Nordic strategy addresses fewer aspects, but applies an ecosystem services perspective more consistently. In contrast with the SDGs, it also includes, as an objective, the use of specific environmental policy instruments, such as eco-labelling, environmental taxes and public procurement guidelines. This reflects a generally progressive and advanced environmental policy portfolio across the Nordic countries, as well as a shared perspective on the merits of such instruments.

Culture, linked to multiculturalism and openness, is a core element for promoting and facilitating sustainability in the Nordic strategy. The SDGs are not specifically cognisant of culture or cultural diversity as a driver of development and social cohesion. SDG 16, although coming close to promoting cultural diversity still falls short of
underscoring its potential as a contributory factor in ensuring economic growth and peaceful and inclusive societies, as set out in the Nordic welfare model.

Regarding inclusion and inequality, SDG 10 recognises three dimensions of inclusion (social, economic and political). The Nordic strategy specifically highlights the need for the better inclusion of immigrants in employment and political life, which can be seen in the light of problems with societal alienation. Unlike the SDGs, the Nordic strategy does not however address migration and the need for a “well-managed policy”. Further, the Nordic strategy does not explicitly address income inequality, although it is arguably a core underlying element of the Nordic welfare model, which is strongly promoted in the strategy. SDG 10 is more explicit and specifies a quantified target for income inequality. Both strategies address the need for functioning social protection nets. Probing deeper into social cohesion, the Nordic strategy explicitly identifies social trust (between generations) as an important factor and “social solidarity and security for everyone” as a core value, whereas the SDGs do not generally include such “soft” characteristics. The two strategies do however share statements about equal opportunities and no discrimination on the basis of gender, age, ethnicity, religion, and disability.

Another area where the scope and aim of the SDGs differ significantly from the Nordic strategy is in their emphasis on development assistance from higher-income to less developed nations. This is explicitly stated in a range of SDGs and their means of implementation (4b, 4c, 6a, 7a, 7b, 8.4, 8a, 9a, 9b, 10b, 11c, 12a, 13a, 17.1, 17.2, 17.3, 17.4, 17.9), reflecting the long road that lower-income countries (and even middle-income countries) will have to travel to attain moderate levels of progress in the medium-term. SDG 17 on global partnership specifically addresses the relationship between low-income and high-income countries and the changes required in terms of the global trade and financial systems. In this way, the SDGs are a step forward from the development assistance-oriented MDGs and embrace a more systematic approach to addressing the global disparities in opportunity, wealth and power whilst putting responsibility for implementation firmly on governments. This international dimension does not figure so strongly in the Nordic strategy, which has more of a regional and domestic perspective. However, under the climate and energy goal, commitments are made to integrate climate and the environment in development assistance and promote the role of Nordic green investment and financing institutions. Under the Nordic strategy, clear commitments are made to use development assistance to
support the adaptation to climate change in vulnerable and less developed countries, though more general commitments are absent.

Finally, a clear difference between the strategies can be seen in the absence of objectives related to peace, justice and accountable institutions in the Nordic strategy. Presumably, accountable institutions is a given in the Nordic region, where the welfare system has been founded on the principles of good administration and its emphasis on accountability, responsiveness and openness. The Nordic strategy does not set objectives for these issues but recognises in the introductory section that “respect for human rights, justice, equality, good administration, low level of corruption, democracy” are all a basis of the Nordic welfare model. SDG 16, on the other hand, sets clear targets for a range of aspects related to governance and institutions (although it does not mention democracy). The necessity of incorporating access to justice, fair trials and societies based on the rule of law shows the depth of the divide between Nordic goals and the SDGs. Further, the inbuilt trust between generations linked to a policy of cultural diversity, openness and access to services maintains that the Nordic region is a role model for aspiring countries. In a number of other countries – particularly those that fall into the bracket of conflict ridden or fragile states as well as a number of high-income countries that want to measure up to the Nordic model – they will have to address and bolster the tenets of good administration as the cornerstone of a functioning state and ensure a process by which laws are enacted, administered and enforced in an accessible, fair and efficient way.

2.2 Nordic indicator work for Sustainable Development

The indicators selected to measure progress on the SDGs and the Nordic SD strategy, respectively, are widely different in scope and selection logic. The Nordic strategy specified 23 indicators in the 2013 strategy document and they are easily accessible and reported on a website (frequency of updates unknown). For the SDGs, the follow-up system comprises both nationally determined country-specific indicator sets and a set of global indicators. In this section, we compare the Nordic indicators with the global SDG indicators. After much deliberation by the Inter-Agency Expert Group on SDG

Indicators (IAEG-SDGs) and the UN member states in the Statistical Commission, 230 global indicators were proposed in March 2016 (ECOSOC, 2016a). It was noted that several required further refinement and that data were lacking. The indicators are now reported on in an online SDG Indicator Global Database hosted by the UN Statistics Division. Currently, 123 indicators are reported as “SDG indicators”. For the countries in the Nordic region, from 47 up to 86 “additional indicators” are reported in this database. The IEAG-SDGs will propose further refinement, by suggesting a tier system capturing data availability and methodological robustness.

Seemingly in both the Nordic strategy and the SDG framework, the ambition was to find indicators that matched the objectives/targets, hence the large difference in the number of indicators included. Clearly, the SDG indicators will require more resources for regular reporting. However, the decision by the Statistical Commission clearly states that “the global indicators proposed are intended for global follow-up and review of the 2030 Agenda for Sustainable Development and are not necessarily applicable to all national contexts, and that indicators for regional, national and subnational levels of monitoring will be developed at the regional and national levels” (ECOSOC, 2016b). The responsibility for reporting on the 123 indicators currently in the database is not entirely clear, i.e. whether it is up to national statistical offices or to the international organisations involved. The need for capacity-building and support for developing countries in order to help them develop standardised, high-quality and reliable data is strongly emphasised, The decision of the UN Statistical Commission, in line with earlier Secretary-General reports, suggests that the Nordic countries are welcome to report their own national indicator sets and the Nordic region its regional SD indicators, should it choose to do so.

### 2.2.1 A general comparison

Table 8 shows our comparison between Nordic indicators and the global SDG indicators (i.e., the 123 indicators currently reported on in the global database as of 23 October 2016). Normal text denotes a more or less exactly corresponding SDG indicator to the equivalent Nordic indicator. Text in *italics* denotes SDG indicators that implicitly or partially address the issue addressed by the Nordic indicator.

Note: *Indicators reported by 23 October 2016 in the UN Statistics Division's SDG Indicators Global Database were screened. Normal text denotes more or less exactly corresponding indicator. Text in italics denotes SDG indicators that implicitly or partially address the issue addressed by the Nordic indicator. Table 8 shows that there is significantly less overlap between the SDGs and Nordic strategy when looking at the indicators currently in use for follow-up, compared with the objectives and targets (see Table 7 and Figure 5). Only about one third (7 out of 23) of the Nordic indicators are also used for following up on the SDGs. Four additional Nordic indicators correspond to comparable (implicit or partial) SDG indicators, but this still leaves almost half of the Nordic indicators without corresponding indicators in the SDG global database.

This smaller overlap may have several explanations. First, there may be more corresponding indicators in the set of 230 indicators originally proposed, than the 123 currently reported on. Second, the highest number of SDG indicators is measured under goals that are not at all or not strongly addressed in the Nordic strategy: SDG 3 on health and well-being (20), SDG 17 on the global partnership (12), and SDG 4 on quality education (10). Third, a key difference between the two indicator sets is that the SDG indicators are more specific. They correspond quite closely to the specific 169
targets, rather than providing background data on issues like urbanisation, life expectancy and demographic trends.

Another difference is that many of the SDG indicators are rather action-oriented (e.g., number of action plans adopted to implement multilateral environmental agreements), whereas the Nordic indicators tend to measure outcomes of policy and societal change (e.g., proportion of environmental taxes to total tax revenue).

### 2.2.2 Comparing specific issue areas

A few comments can be made on the substantive focus of the SDG and Nordic indicators respectively. First, the Nordic indicators feature many environment-related indicators. Several of these are not found within the SDG set. This reflects the fact that the Nordic countries are already quite advanced in environmental policy terms, including the monitoring of outcomes. The Nordic countries could however help to build capacity so that these indicators could be tracked in more countries, by addressing both technical feasibility and political acceptability.

Second, the Nordic set address indicators for GHG emissions. SDG 13 on climate change does not address issues and indicators regulated under the UNFCCC, however, and therefore no such indicators are included in the SDG set. This does not mean however that GHG emission tracking is not central to meeting the broader aspirations of Agenda 2030.

Third, having public debt as an indicator is a cornerstone of the Nordic model in general but it is not explicitly referred to in the SDGs. It is intimated in target 17.4.1 albeit on a track related more to the external debt of highly indebted poor countries. Servicing the public debt provides a periodical and concrete means of budgeting for SDG implementation but there are no viable indicators to support this. Initially, under target 17.13, “enhance global macroeconomic stability, including through policy coordination and policy coherence”, the proposed indicator 17.13.1 was changed from “GDP” to “Macroeconomic dashboard”, thus only including budget allocation for social protection and education.

Given that the SDGs are non-compliant, public debt as an indicator is even further out of reach as it is sovereign and hence a large number of countries are unwilling to include it. In general, forays into inherently domestic political processes are not common across the SDGs. This clearly illustrates why certain member states are seemingly unwilling to embrace cultural diversity in their own
backyard amidst claims of self-determination and in certain cases, ongoing repression of minorities and civil war.

On the Nordic indicator for education, the SDG indicators are largely restricted to primary and secondary school education. Indicators for SDG 9 and 17 go some way towards addressing the scope for innovation, with an emphasis on medium and high-tech industry and ensuring the creation of a conducive policy environment for industrial diversification and value addition to commodities. The Nordic region is often associated with this particular goal and has a global reputation for being a centre of mutual learning and attracting qualified global talent to complement its own highly educated workforce. Additionally, education from primary through to tertiary level is subsidised by the state compared to SDG target 4.1 which only envisages that “all girls and boys complete free, equitable and quality primary and secondary education” by 2030.

One final area where the Nordic indicators differ from the SDGs is the entry point for implementation. The former outlines clear indicators for action at the municipal level, reflecting each country’s much advanced decentralised models. In the Nordic region, this decentralised model is an important mechanism ensuring broad popular participation, responsiveness to patient and citizen needs and efficient care production, all while still preserving equity among the different groups in the citizenry. Moreover, these four health care systems, built on decentralised models (though with varied structures) attract broad acceptance among their citizenry, regularly garnering high levels of support in national opinion surveys. In countries such as Norway, Denmark, Sweden and Finland, health, waste management and education systems have been based on local political control over most policy and administrative decisions, with locally elected representatives setting their own tax rates in order to finance those decisions. Given that the SDGs are non-compliant, public debt as an indicator is even further out of reach as it is sovereign and hence a large number of countries are unwilling to include it. In general, forays into inherently domestic political processes are not common across the SDGs. This clearly illustrates why certain member states are seemingly unwilling to embrace cultural diversity in their own backyard amidst claims of self-determination and in certain cases, ongoing repression of minorities and civil war.
On the Nordic indicator for education, the SDG indicators are largely restricted to primary and secondary school education. Indicators for SDG 9 and 17 go some way towards addressing the scope for innovation, with an emphasis on medium and high-tech industry and ensuring the creation of a conducive policy environment for industrial diversification and value addition to commodities. The Nordic region is often associated with this particular goal and has a global reputation for being a centre of mutual learning and attracting qualified global talent to complement its own highly educated workforce. Additionally, education from primary through to tertiary level is subsidised by the state compared to SDG target 4.1 which only envisages that “all girls and boys complete free, equitable and quality primary and secondary education” by 2030.

One final area where the Nordic indicators differ from the SDGs is the entry point for implementation. The former outlines clear indicators for action at the municipal level, reflecting each country’s much advanced decentralised models. In the Nordic region, this decentralised model is an important mechanism ensuring broad popular participation, responsiveness to patient and citizen needs and efficient care production, all while still preserving equity among the different groups in the citizenry. Moreover, these four health care systems, built on decentralised models (though with varied structures) attract broad acceptance among their citizenry, regularly garnering high levels of support in national opinion surveys. In countries such as Norway, Denmark, Sweden and Finland, health, waste management and education systems have been based on local political control over most policy and administrative decisions, with locally elected representatives setting their own tax rates in order to finance those decisions.

In sum, many SDG indicators are more relevant in a developing country context, not least the large number of indicators under SDG 3 on health (e.g., maternal health, malaria, density of healthcare). The same goes for SDG 2 on ending hunger and SDG 4 on education.
### 2.2.3 Comparison with other relevant indicator sets

As noted above, Eurostat will develop an indicator set to monitor progress in relation to the SDGs in 2017 and released an *ad-hoc* set of some 45 indicators in 2016.\(^{53}\) For the earlier EU Sustainable Development Strategies, the EU adopted 130 indicators for monitoring and ten headline indicators were selected.\(^{54}\) Eurostat reported on the headline indicators most recently in 2015, see Table 9.

#### Table 9: EU SD headline indicators

<table>
<thead>
<tr>
<th>Theme</th>
<th>Headline Indicator</th>
</tr>
</thead>
<tbody>

<td>Good governance</td>
<td>Official development assistance as share of gross national income</td>
</tr>
</tbody>
</table>

Comparing the EU headline indicators with the Nordic ones, there is clearly a high level of overlap. Six out of ten EU indicators can also be found in the Nordic set. The following issues are tracked by the EU but not the Nordic indicators: employment rate of older workers, primary energy consumption, energy consumption of transport relative to GDP, and official development assistance.

When comparing the Nordic and global SDG indicators, it is also instructive to look at the 2016 pilot indicator-based OECD assessment framework (OECD, 2016b). In this set of 73 SDG indicators, a couple of the Nordic indicators lacking global SDG indicator counterparts are indeed matched: nutrient balance of nitrogen and phosphorus, gender wage gap. Furthermore, this assessment interpreted the SDG targets to better fit an OECD country context, by including indicators on e.g., obesity, pension adequacy,

---

\(^{54}\) See http://ec.europa.eu/eurostat/web/sdi/indicators
earning quality and difference in unemployment between migrants and natives. This includes SDG 16 on governance, where indicators such as the use of Regulatory Impact Assessment and ex-post evaluation, trust in public institutions and stakeholder engagement are used to measure progress on SDG targets.

2.3 Nordic co-operation linked to the SDGs

The Nordic countries have a strong tradition of co-operation, based on historic, cultural and societal similarities, trust and common principles promoting co-operation, and organised through various formal and informal fora.

The formal Nordic co-operation between Nordic parliaments (the Nordic Council, formed in 1952) and governments (the Nordic Council of Ministers, formed in 1971) extends today to almost all sectors of society.

The long-term strategic work towards implementing the Agenda spans over multiple years, sectors and governmental shifts. Therefore, the parliaments – and their co-operation body the Nordic Council – have a specific role in the implementation process. Agenda 2030 was also one of the key themes of discussion at the Nordic Council’s Session this autumn (29 Oct–1 Nov 2016).

A new programme in response to the 2030 Agenda, will be decided upon and forwarded for implementation by the Nordic Council of Ministers, and will rely heavily on the support of Nordic ministries in different sectors. Further, it will also rely on the engagement of key public and private players across the Nordic societies.

This chapter provides an overview of the current priorities and initiatives under the Nordic Council of Ministers, relating to the 2030 Agenda. Together with the analysis of the Nordic strategy for Sustainable Development and its indicators, the overview highlights the main opportunities for Nordic co-operation on the SDGs. In order to diversify the picture, some examples are also given of Nordic co-operation taking place outside the formal ministerial structures, for instance, between private sector actors, academia and civil society organisations.
2.3.1 Co-operation under the Nordic Council of Ministers

The Nordic Council of Ministers governs a multitude of activities related directly or indirectly to all of the SDGs.

Nordic co-operation is realised primarily under the Ministers for Cooperation and the 10 “thematic” Councils of Ministers, which actually include 13 sectors of co-operation.55 These councils engage the national ministries in co-operation that adds value to work done nationally. Today, this co-operation covers almost all government sectors except defence, foreign affairs and development co-operation.

A survey among members of the committees of senior officials under the Councils of Ministers, asking about SDG priorities in their work,56 shows that all of the SDGs are targeted within Nordic co-operation. More importantly, the survey shows that most of the 17 SDG goals are prioritised within the work of more than one Council of Ministers, and approached from an economic, social and environmental dimension. Thus, the opportunities to initiate Nordic SDG co-operation on a broad and inclusive scale are quite promising.

55 Business, energy and regional policy are handled by one Council of Ministers, and the children and youth committee NORDBUK is coordinated under the Council of Ministers for Culture.
56 The respondents were asked “Which of the SDGs do you work most within your sector of Nordic cooperation?” The results are based on a survey, produced by Gaia Consulting in September/October 2016. The voluntary survey was performed through a facilitated online platform and had very few respondents.” The results of the survey should be used only as an indication of co-operation and do not necessarily give a reliable and full picture of the committees’ work with SDGs.
The survey shows that SDG 8 *decent work and economic growth* is prioritised in the activities of at least seven Councils of Ministers. 58 Other broadly prioritised themes are *sustainable consumption and production* (SDG 12), 59 *gender equality* (SDG 5), 60 and *reduced inequality* (SDG 10). 61 Among the SDGs mentioned by more than two sectors are, in addition, *good health and well-being* (SDG 3), *quality education* (SDG 4), *industry, innovation and infrastructure* (SDG 9), and *sustainable cities and communities* (SDG 11). Most of the themes are closely related to the *Nordic welfare state*. Figure 6 shows that the priorities of the sectorial Councils of Ministers are quite thinly spread and that it

57 See above on the implementation of the survey.
58 Business, culture, education & research, finance, fisheries, agriculture, food and forestry, labour, regional policy, primary industries, and education & research.
59 Business, culture, education & research, environment, fisheries, agriculture, food and forestry.
60 Children & youth, culture, gender, labour.
61 Children & youth, culture, education, legislative affairs.
might be easier to find broad support for themes that unite several of the SDG goals and targets, rather than focusing on a few specific SDGs.

An overview of the co-operation programmes and action plans of the Councils of Ministers confirms the results of the survey presented above, both the existence of themes prioritised by several ministries, but also the high level of diversity as regards Nordic co-operation.\(^6\) This richness is a definite strength of Nordic co-operation more generally, but at the same time indicates that investments are rather scattered and that it can be difficult to actually define joint priorities that most sectorial committees would be willing to invest in.

In addition to activity under the sectoral Councils of Ministers however, Nordic co-operation has a track record of creating larger joint programmes and of pooling resources from different sectors into larger entities. These programmes have addressed global challenges such as climate change, smart energy solutions, the environment, green growth, health and welfare, urbanisation, gender equality and migration and have usually been initiated at the highest political level (Prime Ministers or Ministers for Nordic Cooperation).

### 2.3.2 Nordic countries joining forces for sustainable development

The Nordic countries have not only created the first macro-regional sustainable development strategy. They have also, over the past 10 years, gained experience of joining forces to battle global challenges. Back in 2007, the Nordic Prime Ministers decided to launch a number of so called Globalisation Initiatives, addressing some of the most crucial joint challenges to the Nordic region. The largest among these initiatives was the Top-level Research Initiative on Climate, Energy and the Environment. The initiative gathered governmental stakeholders and funding agencies, business and academia in vast networks, working on research, innovation and education related to climate actions and clean energy, with a special focus on Northern and Arctic conditions.\(^6\)

\(^6\) Annex 3 ("Nordic Sectors of Cooperation and the SDGs") summarises the priorities of the Councils of Ministers and their ministerial committees and their relation to the SDGs. The table also shows the institutional capacities of each sectoral Council of ministers i.e. joint Nordic co-operation bodies and institutions, which can be used when implementing activities. Specific suggestions that have been put forward by the sectoral committees for a new programme on SDGs are given at the end of this chapter.

\(^6\) For further information see e.g. the publication "Solving the Climate Crisis – A Nordic Contribution" A. Riiser (ed.), NordForsk, 2015.
In 2011, the Prime Ministers endorsed a joint strategy for the *Nordic Region – Leading in Green Growth*, giving birth to a multi-year programme joining the majority of Nordic ministries under the aim of connecting the countries’ economic goals with their environmental goals and targeting e.g. bioeconomy, waste treatment, energy efficiency, fossil fuel subsidy reform, and investment in innovation and research. Each of these issues is highlighted in the Nordic sustainable development strategy and all are relevant to the global 2030 Agenda.64

In addition to climate and environment issues, the Nordic welfare society has also remained in focus in recent years. The programme on *Sustainable Nordic welfare 2013–2015* also stemmed from an intention declaration by the Nordic prime ministers, to work for joint solutions that provide better welfare for all in the Nordic Region, and a better knowledge base for welfare-policy decisions on health, education and labour market issues. The initiative was led by the Ministries for Health and Social Affairs and the Ministries for Education and Research.65

In 2015, the Nordic prime ministers decided to start planning for a new programme on *Nordic solutions to global societal challenges*. This programme will focus on the international promotion and branding of Nordic positions of strength within the themes of “Nordic Green” (with a focus on sustainable cities and climate and energy solutions); “Nordic Food and Welfare” (with a focus on food and nutrition, and welfare solutions) and “Nordic Gender Effect” (with a focus on gender, business and work).

In addition, a priority programme on *integration* is currently being developed in response to the growing numbers of refugees coming to the Nordic region during the period 2015–2016.

---

64 The results of the programme are available in the newly released publication “The Nordic Region – leading the way in Green Growth. Outcomes of the Nordic prime ministers’ green growth initiative 2011-2015” (Nordic Council of Ministers, 2016a).

65 The results are presented in the recent publication, “Nordic welfare alliances. Experiences of working together on sustainable Nordic welfare” (Nordic Council of Ministers, 2016b).
2.3.3 Nordic presidency countries taking the lead

Another important line of development in recent Nordic co-operation is the growing role of the countries holding the presidency of the Nordic Council of Ministers. Since the Swedish presidency in 2013, the presidency country has been allocated a part of the Nordic co-operation budget to kick-start 3-year priority programmes within their themes of choice.

Thus, in the autumn of 2016 Iceland was finalising the NordBio bioeconomy initiative, which brought together education, research and innovation, industry and policy makers to promote sustainable production and the use of living natural resources. The Nordic welfare watch was created on Iceland’s initiative to strengthen and promote due diligence in the Nordic welfare systems, by knowledge building and exchange.

The Danish Presidency of 2015 promoted, among other things, the branding of the Nordic region and joint Nordic values, realised e.g. through the New Nordic Climate Solutions pavilion, which was first arranged at COP21 in Paris and followed up at COP22 in Marrakech, among other events.

In 2016, the Finnish Presidency launched a programme for An Open and Innovative Nordic Region with Healthy People 2020 – Equal Opportunities for Welfare, Culture, Education and Work. The programme aims at stronger welfare policy co-operation and the greater visibility of the Nordic welfare model, with a specific focus on well-being, diversity, equality, gender equality, culturally sustainable development, and children and young people. The programme is implemented cooperatively by the ministries of social affairs and health, employment and economy, and education and culture.

Finally, the priorities of the Norwegian presidency in 2017 can also be seen to be of particular relevance for Nordic co-operation on sustainable development as this particular programme aims to promote green transition, integration, and health, a stronger Nordic voice in Europe within energy, climate, environment, and digitisation,

---

66 One of the concrete outcomes of the programme is a Nordic Bioeconomy Panel, which will develop a Nordic bioeconomy strategy in 2017.
67 Currently discussions are being held on the possibility of following up the project with a biannual Nordic Welfare Forum and Nordic welfare indicators.
68 See the Facebook site Sustainable development the Nordic way.
and the development of a strategic Nordic partnership in foreign policy in order to meet the major new global challenges.\(^{69}\)

### 2.3.4 Nordic co-operation with the private sector on sustainable development

Apart from what may be termed, “formal” Nordic co-operation under the auspices of the Nordic Council of Ministers, a different approach has been tried with the creation of a new programme which will rely heavily on co-operation taking place on the initiative of other players, particularly from the private sector. The Nordic region is for many companies a strategic business area and companies cooperate on e.g. environmental issues. Much of this co-operation is coordinated through well-functioning groups, such as the Nordic Global Compact Network, the Baltic Sea Action Group, HELCOM projects, the Nordic Working Group for Aviation Environment and the Nordic Initiative for Sustainable aviation.\(^{70}\)

The mapping results show that the private sector is interested in public-private partnerships on SDGs and would like to see the SDGs connected to agendas and policy areas outside what could be termed “traditional development policies”. Public private partnerships need to be created where there is an opportunity to improve things and thus not only within the current development co-operation priorities of the Nordic countries. International trade negotiations and financial incentives (such as fossil fuel subsidies, tax regimes etc.,) should be included when talking about the SDGs in order to achieve real impact. At home in the Nordics, public procurement needs to be considered to encourage good corporate behaviour, otherwise the companies with the most demanding codes of conduct and high sustainability standards will be less competitive.

\(^{69}\) The Norwegian Presidency 2017. https://doi.org/10.6027/ANP2016-766

2.3.5 Nordic co-operation on sustainable development within academia and civil society

Researchers cooperate across Nordic borders in the context of Nordic Council of Ministers’ programmes and on a self-organised basis. Nordic research co-operation has an impact on societies both within and beyond the Nordic region.\textsuperscript{72} Mapping confirms that academia is one of the most important parties in networks fostering actions on the SDGs as well as in the area of awareness-raising. To facilitate change, intensified dialogue is called for, both across sectors of society (politicians, the private sector, the cultural sector and civil society) and sectors of research (natural/environmental sciences and human/social sciences).

Non-governmental and civil society organisations cooperate on a voluntary basis, one such example being the New Nordic Aid Narrative, an initiative by CSO’s in Denmark, Finland, Norway and Sweden to “promote Nordic leadership to the full implementation of the SDGs”.\textsuperscript{72} Children and youth organisations cooperate both through the NORDBUK committee of the Nordic Council of Ministers and through other more self-organized fora.

The results of the mapping suggest that the Nordic region would benefit from supporting and harnessing the asset that these kind of fora provide in raising awareness and knowledge on SDGs both within the Nordic societies and internationally.

\textsuperscript{71} Examples being e.g. Nordic co-operation within larger European programmes, or co-operation with developing countries, one specific example being e.g. “football for health projects” (which have been successful both in developing countries and domestically in the Faroes, ref. interview with Magni Mohr, University of Faroe Islands).

\textsuperscript{72} Draft commitment statement of the initiative.
2.4 Communicating the SDGs

The importance of communicating the SDGs more broadly is highlighted by all of the Nordic countries. Communication should take place not only after actions have been taken, but also before and during programmes, in order to include and motivate all stakeholders.

The results of the mapping exercise however show that the availability of strategies and action plans for communication, as well as of communication channels, differs often quite markedly between the countries.

One good example here is Finland, which maintains a website on sustainable development,73 and a platform for society’s commitment that provides national channels for communicating SDGs and the global Agenda.74 The Åland Islands maintain a central website75 and a Facebook forum.76 The Danish Government has allocated 3 MDKK to the company World’s Best News for the handling of a national Communication Platform for the SDGs,77 while in Sweden, SIDA has allocated funds for communication projects submitted by CSOs, businesses and municipalitie.78

The other countries do not have similar nationwide communication channels, but some best practice examples from each country are listed below (table 10)

A new Nordic SDG programme will however require a comprehensive strategy for outreach. The results of a survey undertaken in November/December 2016,\(^7^9\) emphasise the need to identify best practices in communication on both the local and national levels, which can be adopted in other Nordic countries and on a Nordic level (some of the suggestions for instance included, the Society’s Commitment to a Sustainable Development programme and platform in Finland as well as the Grønt Flag Grøn Skole eco-school programme in Denmark). Responses to the survey also emphasized the need for increased communication on existing Nordic success in SDGs, particularly in explaining how they contribute to sustainable development globally.\(^8^0\)

The results indicate the need for a Nordic SDG communication strategy to support joint SDG actions, both in the Nordic region and in international fora. Within the Nordic region, there is a need to engage key stakeholders, including sections of the Nordic public, in action and debate focused on how to advance Agenda 2030 in the region. In European and global fora, the Nordic region could be more strongly profiled as a centre of leadership in thought and action on Agenda 2030.

### 2.5 Summing up the potential for Nordic co-operation on sustainable development

There are a number of strengths to build on when implementing joint Nordic SDG activities. In addition to a wealth of Nordic activities promoting sustainable development from various perspectives, a Nordic programme can also build on a strong Nordic political commitment to sustainable development, the existence of a co-operation structure, the willingness of existing structures to engage in the new programme and the strong potential for alignment with national priorities including the harnessing of existing synergies.

---

\(^7^9\) The survey was produced as a consultative pilot project, included in the consultants’ mapping (and undertaken by Ali Consulting/Gaia Consulting). The survey enquired about the success of the countries’ communication on SDGs. It was published in Finland across multiple channels in Finnish, Swedish and English (through e.g. the national website on sustainable development) in a format that can be easily adapted to other countries. Although most of the people providing responses to the survey chose to remain anonymous, the channels chosen indicate that most respondents are professionally involved with Nordic sustainability and SDG issues.

\(^8^0\) Survey responses are reported in Annex 2 to the report.
The new Nordic programme developed in response to Agenda 2030 will build on the existing Nordic strategy for sustainable development, but should ensure strong links to the global 2030 Agenda. The current Nordic strategy for sustainable development and its related indicators are still up to date and have many points of reference to the SDGs.

The decision to establish a renewed programme for sustainable development in response to Agenda 2030 was made by the Nordic Ministers for Cooperation. Nordic co-operation has experience of previous large-scale priority programmes with elements of Sustainable Development, established by the highest political level (Prime Ministers or Ministers for Cooperation).

The Nordic Expert Group for Sustainable Development has already been established and consolidated and is in an excellent position to take the lead on formulating a programme for joint activities, based on the national expertise of the members and on the input given by the different ministries involved in Nordic co-operation. There is also a multitude of national and Nordic organisations and co-operation bodies that can implement the activities.

The mapping process confirms that sustainable development is indeed a crosscutting theme underpinning all co-operation under the Nordic Council of Ministers, ranging from fisheries, forestry, agriculture and food, business and innovation, research and education, to health and wellbeing, legislative affairs, finances, gender and culture, regional policies, energy, environment, and the labour market.

All sectors work with SDGs either as an explicit part of their work programmes or implicitly through the set priorities. All sectors in respect of Nordic co-operation have confirmed interest in working with issues related to the SDGs and with the new programme. This mapping also shows that the sectors covered within Nordic collaboration, jointly target all SDG goals and a multitude of targets. The action plans and budgets of the Nordic Council of Ministers show that there are already plenty of activities which could serve as a starting point for a new programme.81 Linked to the ambitions and ideas arising from key national and Nordic stakeholders within the

81 See Annex 3 for more details on SDG targets of relevance for co-operation within the Nordic region, and Annex 2 for priorities and examples of already ongoing activities, forwarded by the the Councils of Ministers (through their committees of senior officials) as well as from national key stakeholders interviewed in the mapping exercise.
public, private and civil society sectors, there is already a good basis to formulate common ambitions for Nordic SDG co-operation.

While each Nordic country is sovereignly responsible for national implementation of Agenda 2030, as well as for the country's policies and standings in the UN and other international fora, there is a strong indication that the Nordic countries could gain from enhanced information exchange and knowledge sharing both on SDG implementation as such, and on work with specific SDGs. As chapter 2.10 shows, the different models for SDG implementation in the respective Nordic countries all include specific elements that can serve as an inspiration for the other countries. As top performers on a global scale, the Nordic countries could also gain from using each other as frames of reference when assessing their own country's performance on specific SDGs.

Several stakeholders consulted during the study also suggested that the Nordic countries acting together could strive for a clearer leadership role in the global arena, based on a strong political will, a common sense of urgency and the potential for leverage by relying on a joint Nordic brand.

While the potential for a new programme is undoubtedly strong, there are a number of issues that need to be promptly addressed in order to formulate an ambitious, inclusive but focused programme. These include finding a balance between competing priorities in terms of the sectoral co-operation, pooling the somewhat scattered and already allocated resources, and promoting the opportunities for the Nordic Expert Group for Sustainable Development – and the Nordic co-operation as such – to initiate large-scale action.

The multitude of sustainable development—supporting activities within the Nordic sectors of co-operation inevitably means that a new programme will either have to be all-inclusive or to make (also unpopular) choices between what areas and goals of co-operation to prioritise. This challenge is particularly acute when dealing with a broad and inclusive framework such as the global 2030 Agenda. There might also be a competition between national priorities and those most suitable for Nordic co-operation (based on the added value of cooperating as opposed to only doing national work).
The challenge of competing priorities also connects with the availability of resources for SD co-operation. While the allocation of a major part of the available budget of the Ministers for Cooperation\textsuperscript{82} under this new programme is a promising first step, the programme will need to attract additional stakeholders to invest resources in programme activities, as well as nurturing close synergies with the ongoing and forthcoming presidencies of Nordic co-operation, the new Prime Ministers’ initiative and other major joint Nordic programmes.

A new programme for Sustainable Development is a priori limited to actions within the remit of the Nordic Council of Ministers (basically excluding Nordic actions in the outside world), actions which can be funded through already decided budget plans, and actions which do not contradict or overlap with national work and priorities. At the same time, many national stakeholders, particularly within the private and civil society sectors, would like to see an ambitious programme with real possibilities to enforce action and promote transformative change. The crucial factor in terms of programme success will be the ability of already existing structures for co-operation to mobilise the Nordic societies in agile and influential action towards 2030.

\textsuperscript{82} Currently DKK 10-12 million per year for three consecutive years
3. Conclusions and recommendations

3.1 Strong basis and commitment for Nordic SDG programme

The mapping and analysis of ongoing national and Nordic processes indicates that a good foundation already exists for the outlining of a joint Nordic co-operation programme on the Sustainable Development Goals (SDGs) of the global 2030 Agenda and that this will add value to the national and international work of already carried on by the Nordic countries.

The Nordic countries, including the autonomous regions, have a long tradition of advancing the goals of sustainable development at the national level (as well as jointly internationally) and have also been assessed as being among the top most “SDG-ready” countries in the world. The country profiles relating to Agenda 2030 implementation presented in this report show that all of the Nordic countries83 are engaged in serious work with a view to implementing Agenda 2030 and that this work is supported by a strong commitment from the highest political level. While noting differences in the eight country profiles in respect of Agenda 2030 implementation, for example related to governance and implementation processes, the countries also face a number of shared challenges, which would best be met through the exchange of experiences and joint action. Such actions would include defining when a target is met, especially in domestic contexts, balancing actions at home with actions abroad in a globalised and highly interconnected world and communicating the priorities and accomplishments of the SDGs in domestic political settings and more broadly across society.

A new co-operation programme will thus be built upon a strong foundation. The Nordic region has a sustainable development strategy in place (the first of its kind in the world), which naturally has close links to the SDGs. There is also a set of sustainable development indicators in place, which can be further developed and used to monitor

---

83 Denmark, the Faroe Islands and Greenland, Finland and the Åland Islands, Iceland, Norway and Sweden.
joint Nordic progress on Agenda 2030. The formal Nordic co-operation between Nordic parliaments (the Nordic Council, formed in 1952) and governments (the Nordic Council of Ministers, formed in 1971) extends today to almost all sectors of society. The Nordic co-operation system offers established governance models for enforcing and implementing joint actions. A multitude of current and planned actions within Nordic co-operation already contribute to the goals of Agenda 2030 and SDGs are targeted in the co-operation of all 10 thematic Councils of Ministers (Business, Energy and Regional Policy, Culture and Youth, Education and Research, Fisheries and Aquaculture, Forestry, Food and Agriculture, Environment, Health and Social Affairs, Gender Equality, Finances, Labour, Legislative Affairs).84 This richness is a definite strength of Nordic co-operation, but at the same time indicates that investments are rather scattered and that, as such, it can be difficult to identify joint priorities in which most sectoral committees would be willing to invest. Nordic co-operation does however have a track record in creating larger joint programmes and in pooling resources from different sectors into larger entities. The Nordic Prime Ministers’ Initiative on Nordic Solutions to Global Challenges to be launched in 2017 is an example of such an initiative that will contribute to the overall Nordic response to the attainment of the SDGs. Furthermore, the Nordic Expert Group for Sustainable Development, which includes representatives, central to the national implementation of Agenda 2030, has already been mandated to plan a new Nordic programme and the Nordic governments have allocated some resources (through the Ministers for Cooperation).

The mapping also shows considerable interest in and readiness for Nordic co-operation, including political will and an interest in joint Nordic action on SDGs among a wide spectrum of stakeholders, covering representatives of government, the private sector and civic society. This conclusion is based on the results of extensive stakeholder consultations and interviews undertaken during the mapping process.85 The understanding formed through this process, is that there is a general appreciation of

---

84 These initiatives are further described in chapter 3 and in Annex 2 to the report.
85 The consultation process has included: A total of 46 interviews with government officials, private companies and NGOs/CSOs in all Nordic countries and self-governing entities (August-October 2016), assisting the Nordic Council of Ministers’ secretariat in planning SDG discussions at the formal meetings of the Nordic committees of senior officials (August-November 2016), a facilitated electronic platform for receiving informal input from the Nordic committees (October-November 2016), a communication survey (November 2016), and a stakeholder dialogue meeting with nearly 100 participants 29 November 2016. The outcomes of the stakeholder dialogue process are presented in detail in Annexes 2 and 5 to the report.
existing Nordic co-operation on sustainable development. Stakeholders also recognise Nordic potential and value-added in contributing to the effective implementation of the Global Agenda 2030 for Sustainable Development through a new Nordic programme. A broad level of understanding already exists that the SDGs require input from all sectors of society. The Nordic model of consultation and civil society engagement is thus viewed as a useful model for partnership in the SDG context, while the sharing of practices and tools between Nordic governments and non-government actors (NGOs, the private sector and local level actors) is seen as an important area of Nordic co-operation with a high benefit-to-resources invested ratio.

A renewed Nordic co-operation programme targeting the 2030 Agenda has the potential to help the Nordic countries become even more successful and effective and to bring added value to the work done nationally and in the various international fora. The main challenge will be to ensure that the programme has a lasting impact by selecting activities that add most value to work already done by the various governments and by the private and civil society sectors.

### 3.2 Guiding principles for a Nordic SDG programme in response to the 2030 Agenda

The following guiding principles have been used to outline a suggestion for priorities for a new programme in response to the 2030 Agenda and its Sustainable Development Goals (hereafter called the Nordic SDG programme). The guiding principles are based on the results of the mapping and the stakeholder dialogue.

#### 3.2.1 Added value of the programme

The aim of the Nordic SDG Programme to be prepared in response to the 2030 Agenda is to add value and give effect to the implementation of Agenda 2030 in the Nordic countries by facilitating mutual learning and joint actions on topics of shared Nordic priority and global relevance.

In particular:
• The programme should support concrete action on the SDGs by raising the overall level of investment in SD work and adding value, through Nordic co-operation, to work already being done at the national level. This can be done by providing a platform for pooling resources and piloting joint Nordic activities in response to Agenda 2030 on specific jointly agreed themes and by providing financial incentives in relation to these joint actions.

• The programme should support policy development targeted at creating a common sense of urgency on what needs to be done before 2030 and enabling accelerated progress towards the SDGs. This can be done by sharing knowledge on national work and standards and by facilitating policy dialogue on how to tackle the future challenges facing the Nordic region and on identifying the long-term goals for Nordic SD co-operation.

• The programme should support communication and knowledge sharing on SDGs and SDG action targeted at raising awareness of Agenda 2030 in the Nordic countries, raising the profile of the Nordic region internationally, and increasing the level of knowledge about SDG action and sustainable solutions. This will be done by communicating about Nordic ideas and actions regarding Agenda 2030 implementation in national, Nordic and international fora, and by convening dialogue across countries and stakeholder groups.

While the programme will have a three-year timespan, it is key here that the 2030 timeframe is borne in mind and that long-term change can be advocated in parallel with short-term programme outputs. To maintain momentum and a sense of urgency, as well as to enable effective programme management, the programme planning phase should define immediate (short-term) targets with respective indicators for measuring outputs and the outcome of the programme period 2017–2020, as well as outlining relevant (longer-term) milestones for the attainment of the SDGs by 2030 (e.g., 2025).  

These programmatic targets and indicators should not however be considered as Nordic regional SDG targets or indicators, as such. The comparison between Agenda 2030 and the existing Nordic SD strategy and indicators in section 2.1 and 2.2 above shows that there is already significant overlap in terms of focus areas and objectives.

86 For reference, UN member states have been invited to submit voluntary national reviews of progress towards the SDGs twice during the 2016-2030 period.
between the documents. This means that there is already a shared understanding of sustainable development in place and that the SDGs are not “new” in the sense of requiring ambitious fact-finding or strategizing efforts. The added value of the Nordic SDG programme will be to facilitate and speed up national implementation as well as communicate Nordic approaches to the rest of the world, rather than to develop its own set of regionalised SDG targets.

Regarding indicators, there is less overlap between the existing Nordic set of SD indicators and the global SDG indicators proposed within the UN. Interest in Nordic collaboration on Nordic SDG indicators has been expressed by the national statistics offices in the Nordic region, as well as by various stakeholders consulted for this report. There are two reasons why we should however consider carefully the added value of a new, “Nordic” set of indicators. First, as long as the Nordic Council of Ministers does not plan on reporting progress to the UN, there is no formal accountability requirement. Nordic indicators could of course have other target audiences; with some of which there may be strong accountability relationships (e.g., informing the public). Other less data-intensive means of communication than a set of regularly updated indicators could also be considered, e.g., visualisations and infographics. Second, Eurostat and the OECD have both started looking into indicators adapted for their member state country contexts. The added value of Nordic initiatives in addition to these efforts should be carefully considered. The current set of Nordic sustainability indicators could be complemented with descriptions of which SDGs and targets they (implicitly) address or measure.

3.2.2 Key stakeholders – agents and targets of change

In order to have sufficient impact, the Nordic Expert Group on Sustainable Development should have a strong mandate and role in both designing and implementing the Nordic SDG programme. It is further suggested that specific actions will be led by Nordic or national organisations, by appointment or awarded through open calls.

87 Nordic Statistical Offices, Measuring the implementation of the 2030 Agenda on Sustainable Development, 27 October 2016.
To be successful, the Nordic SDG programme must involve representatives from a broad set of stakeholders, being both drivers of the required action as well as being themselves part of the required transformation to attain the SDGs:

National coordinators and governmental key stakeholders to the national SDG process can help ensure the impact of the programme and its alignment with national priorities (although the programme will not coordinate national work).

Ministries involved in Nordic co-operation have decision making power and budgets for SD activities; hence strong ownership within relevant ministries is a key success factor for the programme.

Nordic institutions and cooperating bodies form the key, already existing asset in the Nordic co-operation context and provide the implementation structure required for a new programme.

Children and youth as game changers have an important role to play. Children and youth associations should be actively involved in the programme, engaging a new generation of Nordic citizens working for sustainable development at home and in collaboration with youth abroad. The voice of children and youth could become stronger by working cooperatively on a Nordic level rather than working separately at the national level.

Private sector stakeholder engagement in responsible and sustainable business development is central if the programme is to have a high level of impact, and become transformative in the longer term. Numerous private sector representatives have indicated their readiness to participate and interest in partnerships with the public sector (PPP) to advance sustainable development.

The municipal level is responsible for much of the activities related to SDG implementation, especially in the Nordic countries where regions and municipalities have high autonomy (including financial autonomy, resources and expertise) and multiple partnerships at their disposal.

Civil society and non-governmental organisations have a crucial role in raising awareness and voicing the needs of the society at large – nationally and internationally – and highlighting the urgency of moving concertedly on SDG action. The role of empowered citizens as change agents cannot be overestimated.

Academia has a critical role in knowledge building, sharing of best practices and lessons learned, innovations and knowledge-based policy development and in facilitating partnerships for sustainable development.
Culture, both the production and the consumption of culture and creative industries, is strong in the Nordic countries, and has the potential to support sustainable development, awareness raising and education. Design is a central and competitive element of many Nordic sustainable solutions.

Funding agencies and private foundations will be needed in the programme, depending on the themes and topics selected. Additional funds will need to be sought from both national and international funding agencies and from private foundations in the Nordic countries.

Media is important in communicating SDG topics and raising the level of awareness required for the building of joint ownership of the programme and also for supporting the presence of a critical voice in the discussion and as a primary proponent of the basic freedom of speech norm.

3.2.3 Criteria for designing programme activities

For the Nordic SDG programme to have relevance, impact and scale, all programme activities should:

• address cross-cutting Nordic strengths or challenges in sustainable development, which are reflected both in the SDGs and in the Nordic strategy on sustainable development. These can include:
  – topics where Nordic countries jointly have most work to do (e.g. reduction of emissions, gender equality)
  – topics where Nordic countries are seen as forerunners (e.g. bioeconomy, energy efficiency, gender equality)
  – areas of traditional Nordic strength that are currently encountering new challenges (e.g. decent work and economic growth, the Nordic welfare model).
• relate to one or several SDG goals and targets and to the Nordic Strategy for Sustainable Development
• preferably address linkages/synergies between goals and targets (e.g. gender equality and climate change adaptation)
• reflect key principles behind Agenda 2030 (transformative, integrative, universal)
• support goals that require co-operation across countries and sectors (Nordic added value)

• have strong national, regional or institutional commitment and be well in line with national, regional or municipal Agenda 2030 priorities in the countries, reflected by funding allocated for a substantial part of the activity budget (e.g. at least 50%) from national, Nordic, or international sources, preferably from both the public and private sector

• be able to communicate clearly the added value of Nordic co-operation for the activity

• involve participatory methods for securing the engagement of children and youth in all actions

• consider gender equality and address gender perspectives in all actions

• focus on the Nordic region but show clear relevance for broader international development.

3.3 Proposal for Nordic SDG programme: Vision and components

The recommendations in terms of the prospective content of the Nordic SDG programme are based on the guiding principles outlined above and the results of extensive stakeholder consultations during the mapping project. The recommendations are presented below.

3.3.1 Vision

As noted above, a number of joint Nordic activities address various aspects of the SDGs. In order to accelerate effective implementation of the 2030 Agenda, the new Nordic SDG programme should be guided by a vision statement, which:

• calls for concrete action and leadership by countries and stakeholder groups (including “SDG champions”)

• supports a joint understanding of the aims and scope of the Nordic SDG programme
• *embraces an understanding of urgency*, setting clear milestones for required action (and back tracking from 2030).

A suggested vision statement\(^{88}\) is:

“A Nordic region where Agenda 2030 – with its universality, its integrated approach, and its ambition to stimulate transformative solutions– is known and accepted throughout society as an underlying rationale, benchmark and driver for sustainable development, and as an important context for the Nordic region’s relationship with the rest of the world. The Nordic region is seen, both internally and internationally, as a hub of ideas and practical, scalable solutions to sustainability challenges.”

The proposed vision is a “working vision” for consideration and potential further elaboration by the Nordic Expert Group.

Importantly, the recommendation based on the mapping results and stakeholder discussions on this study is to adopt a relatively brief vision statement of the kind of above, rather than developing a Nordic SDG strategy, SDG targets adapted for the Nordic region or a new set of Nordic indicators to monitor Nordic progress towards the SDGs.

### 3.3.2 Programme components and focus themes

To support the vision and the guiding principles presented above, a Nordic SDG Programme consisting of four mutually reinforcing components has been outlined. While the Nordic SDG programme will provide a forum to address all SDGs to some extent, a number of flagship actions on specific themes considered to be of the highest relevance for the Nordic countries are proposed, taking note of the criteria listed above (3.2.) The programme components and main stakeholder groups are visualised in figure 7.

---

\(^{88}\) Note that this vision is reproduced in Annex 1 which outlines guiding principles for communication. For effective communication work, a vision is also required.
The objectives, as well as suggestions for an implementation structure and key themes/topics for each programme component are briefly presented below.

Programme component I: Pilot projects for accelerated SDG action

Objective: To pool resources and join forces in concrete SDG action, co-funded by national, Nordic and international sources, incl. funding incentive from the programme budget.

Implementation structure: The Nordic Expert Group will decide on pilot projects based on project proposals, and award them partial funding, with up-scaling and replication potential being an important award-criteria. Activities will be governed by different Nordic and national lead organisations and reported back to the Nordic Expert Group. Sharing of lessons learned, best practices and communication will be an integral part of all pilot projects, hence feeding into programme components III and in particular IV (see below).

Themes/topics: Within programme component I, it is suggested that the pilot projects have a specific thematic focus to ensure tangible outcomes within the 2017–2020 period. With regards to potential themes (cf. Annexes 2 and 5), based on the
Guiding principles (section 3.2.)), and noting significant challenges with the environmental sustainability of consumption in the Nordic region, broad stakeholder support for accelerated action under the theme of sustainable consumption and production (SCP) exists. In a globalised and highly interconnected world ecological and social footprints as well as climate risks are easily exported/imported, through daily consumption and production based choices. Under this broad SCP umbrella, two potential sub-themes for pilot initiatives have been identified related to sustainable lifestyles and SDGs in value chains. The themes provide ample opportunities to make use of Nordic strengths and engage a broad set of stakeholders for accelerated action with Nordic and international impacts.

The Sustainable lifestyles sub-theme has potential to engage and empower all Nordic citizens and, in line with the programme vision, help all citizens become part of the solution. With a Nordic scope, it would showcase lifestyles across the Nordic regions, provide a critical mass of innovative examples, and contribute towards shaping a future Nordic identity in consumption behaviour. This sub-theme could include pilot initiatives addressing:

- Empowerment of people to choose, supporting sustainable consumption choices e.g. though targeted information and (financial) policy measures, thus ensuring that inclusiveness is a central part of the Nordic welfare model.
- Competence and awareness of sustainable lifestyles, through education and by engaging children and youth as game changers.
- New ways of consuming, e.g. through replacing material consumption by services and/or through a sharing economy in various sectors of the society.

The SDGs in value chains sub-theme has the potential to address sustainability and responsibility issues on a global scale. It can encourage the Nordic private sector (including its expertise and financial resources) to become a solutions provider in terms of the SDGs and a transparent communicator of sustainability issues in value chains. This sub-theme could include pilot initiatives addressing:

- Sustainable food production and value-chains.
- Responsible sourcing and value-chain management in textiles & clothing, furniture, minerals, metals and telecommunication sectors.
• New partnerships between private and public sector as well as consumers in addressing SDGs in value chains.

Programme component II: Exchange of information on national implementation of Agenda 2030

Objective: To support knowledge sharing between national Agenda 2030 implementation coordinators and support Nordic policy development with international foresight.

Implementation structure: It is suggested that a knowledge sharing forum for national Agenda 2030 coordination offices will be established as an integral part of the activities of the Nordic Expert Group for Sustainable Development. This can be done by extending the membership of the group to include at least one representative of the coordination office from each country (supplemented by other experts central to the national implementation).

Themes/topics: Within programme component II Nordic SDG initiatives could address the following topics:

• Investigating in which areas Nordic co-operation could enhance national performance. This will enable accelerating progress towards SDGs by building on each other’s strengths.
• Peer review for policy coherence. This action of knowledge sharing will enable long-term development of more streamlined policies, making co-operation and joint action easier and strengthening the global impact of the Nordic region.
• Indicator co-operation between Statistical Bureaus. This knowledge sharing action will enable more comparable data to be gathered in the long-term and increase opportunities for mutual learning, review, and more efficient indicator work in the Nordic countries.\(^8^9\)
• Forward-looking analyses of international SDG development. Topics should be chosen from a list of those of greatest mutual interest to the Nordic countries, the action builds on a shared knowledge base which can be used by each country when making their own policy decisions.

---

\(^8^9\) Note that Nordic Statistical Offices have already collaborated by submitting a report to the Nordic Council and Nordic Council of Ministers, Measuring the implementation of the 2030 Agenda on Sustainable Development, 27 October 2016.
Programme component III: Knowledge sharing on SDGs and Nordic SDG action

Objective: To increase knowledge about SDG action and sustainable solutions and support mutual learning within the Nordic region and between the Nordic region and others.

Implementation structure: Key topics for knowledge sharing could be decided by the Nordic Expert Group, either in accordance with an annual work plan or as a result of a lightly administered open call. The knowledge sharing activities should actively take note of and harness synergies with other Nordic events and platforms for SDG relevant knowledge sharing, with potential event organisers including a wide variety of different national, Nordic and international organisations. Major Nordic SDG events could be organised e.g. 1–2 times / year and can be open or closed, physical or virtual. Events could be organised back-to-back or integrated with existing “events considered to be of SDG relevance”, thus boosting Nordic SDG action in connection with related events. School campaigns and various cultural events may provide interesting opportunities for impactful knowledge sharing. Target groups will vary with respect to the event, but should always involve several of the main stakeholder groups (see section 3.2.2).

Programme component III is closely interlinked with component IV (Communication, see below), and will provide important input into and opportunities for successful Nordic SDG communication.

Themes/topics: Within programme component III, Nordic SDG initiatives could address SDGs more broadly, or thematically focus on specific SDGs (SDG 12 or others) where timely and targeted knowledge sharing is considered of high value-added (making use of criteria outlined in section 3.2.3). Potential priority themes for knowledge sharing can include:

- Topics related to the Nordic model and its role in SDG implementation and to current and future challenges of the Nordic societies:
  - Youth and employment, youth and health e.g.
  - How to preserve and further develop Inclusive societies in light of the SDGs (different inequality issues and Nordic best practice in reducing inequalities).
  - The role of culture in SDG implementation.
  - The green transition and the Nordic societies (bioeconomy, energy issues, societal issues).
• Topics related to the global development and the role of the Nordic countries e.g.:
  – Nordic solutions to global energy, climate, welfare challenges.
  – Best practice in SDG implementation: Dialogue with other regions.

More example topics can be found in Annex 2 (topics for the programme suggested by Nordic sectoral committees and by national and Nordic stakeholders to the programme) and Annex 5 (summary of the stakeholder dialogue meeting).

**Programme component IV: Communication**

*Objective:* The communication component will address communication within the Nordic region:

• Support national efforts to mobilise Nordic societies for Agenda 2030.
• Support cross-fertilization of good ideas and practices between Nordic countries.
• It will also address communication with the rest of the world and the international level.
• Help Nordic actors to showcase their sustainability solutions.
• Reinforce the Nordic region’s global brand around sustainability and innovation – including by initiating a Nordic SDG programme.
• Reinforce the Nordic region’s profile as a co-operation partner.

*Implementation structure:* The communication part includes communication coordinated by the Nordic Council of Ministers’ communication department, in collaboration with the main national stakeholders.

*Themes/topics:* The baseline, underlying principles, and main components of a comprehensive communication strategy have been outlined as a sub-project to this study. *The communication strategy paper is presented in Annex 1.*

3.3.3 **Synergies with other major themes within Nordic co-operation**

The formulation of this Nordic SDG programme has taken careful note of existing and planned Nordic initiatives in order to avoid overlap while ensuring that it is able to harness potential synergies (see also section 2.3). In addition to the criteria presented
above (section 3.2.3), such interlinkages with other Nordic initiatives has also been taken into account, e.g. when suggesting a narrower SDG thematic focus for Programme component I (Pilot projects for accelerated SDG action 2017–2020, with a thematic focus on sustainable consumption and production) whereas leaving more flexibility and room for manoeuvre for other projects components.

For example, the new Prime Ministers’ Initiative addressing Nordic solutions to global societal challenges is being launched in 2017, something which can effectively be seen as a “twinning programme” to the forthcoming Nordic SDG programme. These two programmes will form the core of joint Nordic efforts to promote SDG attainment. While the Prime Ministers’ initiative focuses on the Nordic countries’ contribution with tested, replicable and scalable solutions to SDG challenges globally, this Nordic SDG programme has a strong focus on what needs to be done in the Nordic countries as part of Agenda 2030 implementation. Active dialogue and mutual sharing of lessons learned and best practices should be ensured with the prime ministers’ initiative.

Internally, in the Nordic region, the programme also has strong links with ongoing efforts to battle current challenges related to the Nordic welfare model in a broad perspective, with a focus on the inclusion of all three dimensions of sustainable development, a commitment of the different regions and municipalities, and the inclusion of particularly vulnerable groups (children, elderly people, people with disabilities, immigrants, unemployed youth etc.).

Evidently, the Nordic SDG programme also has strong links to ongoing Nordic efforts promoting Green Growth, including Nordic bioeconomy and cleaner energy and food solutions. Results from these initiatives should also be “SDG labelled” and should be included, in particular in the programme’s knowledge sharing and communication components.

Figure 8 highlights some of the interlinkages between the presently developed Nordic SDG programme and other joint Nordic efforts that have been taken into account in outlining this programme proposal, and which should be carefully noted and made use of during the actual implementation of the Nordic SDG programme.

This proposal has been prepared to serve as a knowledge base for the Nordic Expert Group for Sustainable Development when preparing a decision on the scope and contents of a new Nordic SDG programme during the spring of 2017. The final decision on a Nordic SDG programme will be made by the Ministers for Nordic Cooperation in September 2017.

Sammenfatning

Denna rapport för Nordiska ministerrådet, utarbetad av Gaia Consulting Ltd och Stockholm Environment Institute, informerar och stödjer den nordiska expertgruppen för hållbar utveckling i att formulera ett nytt nordiskt program som svar på Agenda 2030.

2030-agendan, som antogs av FN:s generalförsamling i september 2015, beskriver en ambitiös och universell handlingsplan för människor, planeten och välstånd och ska stärka fred och frihet i vid bemärkelse.

Rapporten kartlägger och rapporterar pågående nationella och nordiska hållbara utvecklingsprocesser och initiativ, prioriteringar och utmaningar i syfte att identifiera, analysera och rekommendera delar av ett nytt nordiskt program som svar på Agenda 2030, inklusive kommunikation av de globala hållbarhetsmålen. Rapporten bygger på en omfattande dokumentstudie, 46 intervjuer med nationella aktörer, dialog med alla de tio nordiska fackministerrådens ämbetsmannakommittéer och ett stort dialogmöte med aktörer från regeringar, den privata sektorn och civilsamhället som hölls i Helsingfors den 29 november 2016.

Flera nuvarande och planerade åtgärder inom det nordiska samarbetet kan bidra till målen för Agenda 2030 och det kommande programmet kommer att bygga på redan befintliga och planerade nordiska initiativ på ett kompletterande och samverkande sätt. De nordiska statsministrarnas initiativ om nordiska lösningar på globala utmaningar som ska lanseras år 2017 är ett exempel på ett initiativ som kommer att bidra till det övergripande nordiska svaret på hur de hållbara utvecklingsmålen kan uppnås.

I rapporten beskrivs de viktigaste riktlinjerna och föreslagna syftena, målen och fokusområdena för det kommande programmet. Syftet med programmen är att lansera gemensamma nordiska aktiviteter som ger ett mervärde till det nationella och internationella arbetet i länderna, vilket sätter ett starkt fokus på genomförande, lärande och utnyttjande av synergier. Därför föreslås ett program bestående av fyra huvudkomponenter, däribland i) pilotprojekt för snabba åtgärder för hållbara utvecklingsmål, ii) utbyte av information om det nationella genomförandet av Agenda 2030, iii) kunskapsdelning om de globala hållbarhetsmålen och nordiska åtgärder för de globala hållbarhetsmålen och iv) kommunikation. Programmet förväntas finansiera konkreta pilotåtgärder med uppskalningspotential och sätta i gång en bred uppsättning kommunikations- och kunskapsdelningsaktiviteter samt underlättat dialog för att stödja policyutveckling. Medan det är tänkt att programaktiviteter med anknytning till kunskapsdelning, policyutveckling och kommunikation ska omfatta alla de gemensamt överenskommna globala hållbarhetsmålen och nordiskt arbete för hållbara utvecklingsmål i allmänhet, förväntas pilotprojekten fokusera mer specifikt på teman prioriterade under kartläggningsstudien som i stort sett hör hemma under den övergripande beteckningen hållbar konsumtion och produktion.

Annex 1: Recommendations on principles and tools for a communication strategy

Nordic implementation of the Global Agenda 2030 for Sustainable Development.

**Recommendations on principles and tools for a communication strategy**

**Introduction**

These recommendations relate to how the Nordic Council of Ministers (NCM) can raise awareness about Agenda 2030, as well as to raise the profile of the Nordic region by communicating about Nordic ideas and action regarding Agenda 2030 implementation in international forums. Note that there is also an important role for the NCM to facilitate communication and convene dialogues, taking place directly between member countries and between stakeholders. This role is outlined in programme component II in section 3.2.2 in the main report.

Given that the final form and priorities of the programme are not yet settled, these recommendations cannot be too specific, and largely offer directions and principles for design of a final communications strategy, as well as some suggestions for concrete tools.

The recommendations are based on our expertise and experience in communicating sustainability challenges and solutions, ideas and suggestions gathered from institutions and stakeholders interviewed for the mapping exercise, ideas and suggestions made by participants at the stakeholder dialogue meeting in Helsinki on 29 November, inputs to an online survey published in several professional...
channels in Finnish, Swedish and English, and conversations with communications staff at the Nordic Council of Ministers.

**Background and context**

A potential Nordic programme would be launched in a time of political uncertainty, where the consensus around globalism and global norms is looking fragile. Suspicion of supranational processes and organizations as threats to national sovereignty has moved into the mainstream of political discourse. At the same time, sustainability challenges, such as climate change, have become increasingly visible. However, developments in, for example, the US and Syria (and the UN Security Council) contribute to a sense of powerlessness to make positive, forceful and large-scale contributions to sustainability.

This has several implications for communicating Agenda 2030 in the Nordic region. One is that institutions must be careful to avoid any sense that Agenda 2030 is being imposed from the top down, particularly by the UN. Instead, the emphasis in communications within a Nordic programme should be on providing fora and platforms for Nordic actors to tell their own stories and share their solutions with their peers.

Another implication is that Agenda 2030 can be a rallying point for hope and action. Fulfilling the SDGs is not just box ticking, not just something our governments should be doing to meet some distant, rather bureaucratic obligation, but a way to be part of the solution. A compelling vision of a 2030 future should be complemented with empowering messaging focused on practical action, on what different target audiences can do, and demand, in order to help realize that vision. Four ways Nordic citizens can help in achieving global sustainable development could be summarized as:

1. By what we do within the Nordic region (e.g. production, waste management, respect for environment).
2. By what we consume (e.g. sustainability through our supply chains).
3. By what we share (development co-operation, knowledge and technology, listening).
4. By what we stand up for (Nordic countries as international actors in forums such as the EU, UN).
**Added value of Nordic communication on Agenda 2030**

Nordic co-operation on Agenda 2030 can add real value to support national efforts. The Nordic countries generally have similar development and wealth status, face similar challenges, and take similar approaches to problem solving. This means that many of the same messages are likely to resonate in different Nordic countries. Also, the problems and solutions of one Nordic country will be recognizable to others, so peer effects will operate relatively well in mobilizing action.

On the international stage, Nordic co-operation on communicating under and Agenda 2030 programme could add value in practical terms by providing spaces to present Nordic best practices related to Agenda 2030 implementation. The Nordic region’s international brand can also reinforce the credibility and outreach potential of Nordic solutions to sustainability challenges.

**Proposed vision and objectives**

To facilitate effective communication, we recommend a vision to guide the design, implementation and communication Nordic programme. An example of a vision statement could be:

A Nordic region where Agenda 2030 – with its universality, its integrated approach, and its ambition to stimulate transformative solutions– is known and accepted throughout society as an underlying rationale, benchmark and driver for sustainable development, and as an important context for the Nordic region’s relationship with the rest of the world. The Nordic region is seen, both internally and internationally, as a hub of ideas and practical, scalable solutions to sustainability challenges.

A communication strategy should address communication within the Nordic region, with objectives such as to:

- Support national efforts to mobilize Nordic societies for Agenda 2030.
- Support cross-fertilization of good ideas and practices between Nordic countries.
It should also address communication with the rest of the world and the international level, with objectives such as to:

- Help Nordic actors to showcase their sustainability solutions.
- Reinforce the Nordic region's global brand around sustainability and innovation – including by initiating a Nordic Agenda 2030 programme.
- Reinforce the Nordic region's profile as a co-operation partner.

**Overarching principles**

**Framing the SDGs**

When building narratives, the SDGs can be presented as the tools *not* the task, or an end in and of themselves. Agenda 2030 is about a vision of a sustainable future. The SDGs and their targets are a checklist of the many diverse changes that need to happen in human interactions with the planet in order to achieve that vision. They help us to identify challenges, spot interactions, and (with indicators) check that we are on the right track. But the task is sustainable development.

**The added value of Agenda 2030 in light of existing SD strategies**

One key question is how to understand and communicate the added value that an Agenda 2030 approach brings to ongoing processes in the many areas touched on by the SDGs. This question is particularly relevant in the Nordic region, where there was a pre-existing Nordic SD strategy and also national-level SD strategies or efforts. Two of the underlying principles of Agenda 2030 could be picked up here, integration and universality, as well as 2030 as an endpoint year.

A Nordic Agenda 2030 programme should emphasize *integration and interactions* between challenges and processes in different areas of policy (or other activities, depending on the target audience). The SDGs and their targets can be used as a way to characterize challenges and processes, place them within the larger integrated framework, and highlight interactions.

On *universality*, messaging could focus on the how the Nordic region and the rest of the world are interdependent. Therefore, messaging relating to a Nordic programme should not only focus on domestic achievements or efforts, but explain how this work
contributes to sustainable development globally. Universality in egalitarian societies can also be interpreted as reaching the so far unreached.

Finally, Agenda 2030 has a clear endpoint – 2030 – which can be used as a mobilizing device. It provides both a “deadline” and a specific timepoint for a future vision. Given that it is in fact a very short time in which to achieve the kind of transformation implied by Agenda 2030, it can be used to put pressure on actors to present their plans and start taking action. Messaging could be tied into existing timelines that actors operate with; e.g. three terms of office for politicians and policy officials, or 14 annual reports in which companies can demonstrate actions and results to shareholders, or when one Nordic child born today will complete primary education – hopefully in a sustainable future. Constructing visions around a sustainable Nordic region in 2030 could also help to identify aspirations and the new social practices, technologies etc. we need to start developing now.

**Communication as mobilization**

Agenda 2030 is about change – and this change requires action from all levels of society – especially true in the Nordic region with its high per capita consumption footprints and low levels of poverty. This means that everyone we communicate to about Agenda 2030 should be part of the solution – and communications should aim to mobilize sustainable change. It is particularly important to make communications a part of the process starting from the very beginning in all sustainable development programmes in order to involve and motivate all stakeholders.

**Use the power of social norms and peer inspiration**

Programme communications should aim to support peer-to-peer inspiration regarding sustainability solutions and choices, leading to gradual formation of more sustainable social norms. This aim to give citizens opportunities to talk about their own actions and ideas – a proven way of inspiring behaviour change. Research on communicating issues like climate change also points to the role of social networks, i.e. that communication is more likely to lead to behaviour change if it comes from closer nodes in an individual’s network than distant ones.
Build on creative energy – set challenges to inspire and reward innovation.
The Nordic region is known as a hub of creativity and innovation. Challenges and
competitions, with good ideas rewarded by public recognition, can help to mobilize creative
solutions at all levels, as well as helping Nordic citizens to internalize Agenda 2030.

Focus on goal interactions
When communicating about the SDGs, setting challenges and helping stakeholders
tell their stories, there should be a focus on interactions between goals and targets:
on addressing trade-offs and on identifying solutions that “kill two (or more) birds
with one stone”.

Partnering and networking
Agenda 2030 touches on nearly every aspect of life. Successful implementation will be
more likely if it becomes internalized into existing processes, ideas and debates, rather
than being perceived as a new, separate agenda. From a communication perspective it
therefore makes sense for a Nordic Agenda 2030 programme to partner with existing
initiatives and events. Their networks could greatly add to the outreach and visibility of
the programme for minimal investment, and add value to the events and initiatives by
locating them within the larger sustainability effort and the Nordic sustainability brand.

Target groups
While Agenda 2030 essentially involves and affects actors across society, a Nordic
communications programme could consider prioritizing the following:

- Nordic children of school age.
- Nordic young people, particularly those active on social media.
- Nordic innovators, including students and entrepreneurs.
- Nordic municipalities.
- Nordic businesses whose value chains are associated with significant
  sustainability risks (e.g. those sourcing commodities from areas vulnerable to
deforestation or climate change; those using potentially hazardous chemicals).
- European and international policymakers.
**Common tools**

These are some suggestions for tools and activities that could support communications to several target groups.

**A dedicated online platform**

The programme could set up a website or possibly social media platform that would include:

- basic information materials based on the Nordic narrative on Agenda 2030 (see below)
- Information about challenges, competitions and entries
- space for “own stories” – for example videos by Nordic stakeholders about their Agenda 2030-related projects.

**Nordic 2030 branding**

The New Nordic Climate Solutions campaign offers a good model for how a Nordic 2030 brand could work. A visual brand, a phrase like “Nordic sustainability solution” or “Nordic 2030 solution”, and a related hashtag could be used to endorse and highlight Nordic best practices, both domestically and internationally. There should also be a consistent visual way of presenting goal interactions in challenges, solutions etc.

Useful in this could be the new set of icons and “short” versions of SDG targets being developed by the Swedish company New Division, which should make it possible to express these interactions in a visually attractive way. (New Division is founded by Jakob Trollbäck, who was behind the design of the SDG icons and created the Global Goals term that were donated to the UN, and thus provide a direct link to the UN and global level of Agenda 2030 implementation.)

**A common Nordic narrative on Agenda 2030**

There have been many attempts to explain and present Agenda 2030 for various stakeholder groups, including in the Nordic region. Building on what is available, A Nordic programme could usefully try to compile a narrative and information materials that are appropriate to the Nordic region (e.g. on sustainable consumption) and the aims of the programme (mobilizing change).
This could be rolled out via the dedicated online platform, presented in different formats aimed at different age and target groups (with appropriate emphasis), and made available for download or streaming.

And important element of this could be to go below the level of goals to the targets – which have so far rarely been communicated in non-technical ways.

**Sample messages**

- “Agenda 2030 is about solving today’s problems for a sustainable future”.
- “You are part of the solution”.
- “With Nordic creativity we can find sustainable solutions”.

**Tools for specific target groups**

This section presents some ideas for tools and approaches that could be considered in relation to specific target groups. However, Agenda 2030 communications for specific target groups could also be an area for sharing ideas and best practices between Nordic countries, as there are several promising efforts across the region.

**Children and youth**

Children and youth have the biggest stake in sustainable development. In the medium term they will also be the ones who need to respond to changing and unanticipated sustainable challenges. The knowledge and values they bring home from school are also known to influence the behaviours of the adults around them. For all these reasons, children and youth should be a priority target audience for communications under an NCM Agenda 2030 programme.

Given the very high school attendance rates in the Nordic countries, schools and school classes provide an ideal forum for reaching children up to and including secondary school age. Taking a “learning-by-doing” approach, schools and classes could be encouraged to make joint commitments related to an SDG target, devise solutions together, and measure (and celebrate) results together. The commitments, progress reports and stories could be located on a common Nordic platform (website, complemented by social media channels).

Competitions, joint Nordic-produced TV/online programmes, celebrity endorsements and visits could be used to provide extra incentives to participate.
The NCM could work with NORDBUK or another appropriate partner to develop modules for educators on how to work with their children on such projects. The commitments website and storytelling (e.g. video clips by the classes posted to social media) could help to inspire and incentivize other classes. To maximize sharing between Nordic countries it would be important to highlight at least key points of the commitments and solutions into other Nordic languages. Ideally – particularly for older children – there would be some element of integration in the challenges (e.g. “Improve X without harming Y or Z”, or make progress towards several targets with one action).

Youth are a more diverse target group. As well as targeting them in schools, a Nordic programme could consider other fora in which young people across the Nordic region gather and form peer groups for targeting with communication activities.

The Nordic region has several youth movements and networks that could be valuable partners in outreach about and under the programme. However, these still represent a small proportion of youth and often identify with a narrow set of interests or causes. In order to embed sustainability thinking and sustainable choices into young people’s everyday lives, it is necessary to access a wide variety of channels associated with different aspects of young people’s lives.

**Nordic innovators**

Given the array of areas in which the Nordic region is a recognized leader in technological innovation, mobilizing Nordic innovators – in ICT, gaming, entertainment etc. – around Agenda 2030 could be a very valuable contribution to global sustainability efforts.

Nordic Innovation would be a natural partner for a Nordic Agenda 2030 programme. The challenge for the annual Hack4Norden competition could be related to creating solutions that lead to (profitable) progress towards several SDG targets at once.

At the same time, the project could consider competitions between college-level courses. An interesting current example in Sweden saw students of Berghs communication school in Stockholm set the challenge of working with a chosen business to develop a sustainable business or communication idea. The project counted towards their academic score.

Best practices from Nordic innovators could be highlighted in, for example, Nordic presences in international events.
Municipalities
To support sharing between municipalities, the NCM could explore making the Nordic Built Cities Challenge to more explicitly incorporate SDG target areas – and especially solutions that address several target areas at once.

Businesses
Many forward-looking businesses are becoming aware that sustainability in their value chains is not only a matter of corporate social responsibility or public image, but also vital for reducing business risk. At the same time, their responses, while sharing many common goals, tend to be fragmented.

A Nordic Agenda 2030 programme could add value by providing visibility, especially in international forums, for Nordic businesses that have made significant commitments or practical efforts to reduce sustainability risks in their value chains. Another important function could be to provide spaces for other actors along the same value chains (for example traders, producers and produce country governments, investors, financiers) to present and discuss their own sustainability efforts.

The programme could also communicate some other business-focused Nordic sustainability initiatives such as the City of Helsinki’s Climate Partners network (http://www.hel.fi/www/Helsinki/en/housing/environmental/enterprises-events/climate-partners/)

Tools for the international stage
Approaches here will need to take into account the new Nordic branding strategy that is currently being developed.

Nordic pavilions in major events such as COP23 and CSW would be a key way to meet the objectives. An approach could be taken similar to that for New Nordic Climate Solutions – events, use of a hashtag, publications highlighting selected projects.

Nordic pavilion events should include a dialogue element – inviting representatives from other countries to comment on Nordic ideas and present their own. The choice of partner countries should take into account national development co-operation priorities, the nature and theme of the event, and – especially when it comes to sustainable consumption and production – countries along Sweden’s value chains.

Events to consider for a joint Nordic present include the UN High Level Political Forum (in June/July every year).
Annex 2: Priorities, themes and topics suggested for the new programme

All Committees of Senior Officials under the Nordic Council of Ministers have during August–November 2016 discussed the SDGs and their priorities for a new programme. All committees have communicated positive interest in a new programme in response to Agenda 2030. Some committees have also suggested specific priorities for the programme, while others have made reference to existing priorities of SDG relevance in their working programmes. Some committees are still in process with formulating priorities. All suggested priorities and activities will be forwarded to the Nordic Expert Group on Sustainable Development for due consideration, by the end of 2016.

Table 11: Suggested priorities forwarded by sectorial committees for the new SDG programme – Status by the End of December 2016

Table 14: Suggested priorities for Nordic activities forwarded by national stakeholders interviewed for the mapping\(^\text{93}\)

<table>
<thead>
<tr>
<th>Suggested priorities from national stakeholders for the new SDG programme</th>
<th>Brief description</th>
</tr>
</thead>
</table>
| Arena for the national implementation in the Nordic countries | The Nordic countries are all in the top of implementing the SDG’s and need each other as a frame of reference/mirror  
How to show Nordic leadership to the international community while still striving to do more at home? (benchmarks, baseline, and measurements and indicators, profiling Nordic achievements as best practice etc.)  
Sharing experience on SDG implementation gaps in each Nordic country, through sharing of the mapping and measuring.  
Sharing Nordic best practice to the outside world on environmental indicators (which are next to impossible to measure in the SDGs and are not comparable to the Nordic region).  
Explore greater alignment possibilities when using data for designing policies (from parental leaves to domestic violence)  
Develop exchange on experiences on the indicators work, in co-operation with the statistical bureaus |
| Open international forum for exchanging experience and ideas on Nordic SDG work | Modelling the Åland experience or events like the Arctic Circle, where people come together, mix and test ideas. For example an annual very visible event.  
Strengthen the communication between the Nordic Council of Ministers and the non-governmental “informal” Nordic co-operation |
| Topics of specific relevance for the Nordic countries | Pick out a few targets, where the Nordics can achieve something through joint action; harness Nordic funding and public-private partnerships towards a common goal |
| Involving the regional level and municipalities in sharing best practices and common challenges in working with the SDGs at county/municipal level | Nordic co-operation adds value when connecting regions and municipalities with similar challenges or strengths. Good examples from e.g. the co-operation between the West Nordic societies on twinning cities etc. |
| PPP for government and business joining forces on specific challenges. Also toward the outside world | Sharing best practice of fora for working on the SDG’s, modelling the Swedish Leadership for Sustainable Development “experiment” of company collaboration with Sida as convener. (Denmark and Norway have already shown interest in different ways.). Industrial umbrella organizations in Nordic countries could be more active in bringing together Nordic companies, maybe in collaboration with the ministries. PPP collaboration needed to encourage and incentivize change also in other parts of the world (companies can engage their suppliers and sub-suppliers, but need the Nordic governments to help their government-counterparts on the governance issues like maps for logging concessions and to reach further down in the supply chain). Start discussion at home on difficult topics (like organic farming debate) with the long-term aim to go global. Creating multi-stakeholder partnerships “at home” in the Nordics which can act also in the outside world. Developing financing instruments for initiatives linked to SDGs that require investments that have a public and private element. |

\(^{93}\) Suggestions collected through interviews made by Gaia Consulting and Stockholm Environment Institute August-October 2016.
<table>
<thead>
<tr>
<th>Suggested priorities from national stakeholders for the new SDG programme</th>
<th>Brief description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Children and Youth</strong></td>
<td>Increased co-operation between children and youth associations in broad SDG work inside the Nordic sand abroad. Use the NORDBUK committee efficiently, and contacts between youth alliances.</td>
</tr>
<tr>
<td><strong>Awareness raising measures</strong></td>
<td>Develop a communication package on SDGs focused on different types of stakeholders. For instance for SMEs materials that could be translated for different countries on how to easily incorporate SDGs in their business operations. Aim is to save resources and money if common materials are developed (Denmark). Webinars on the SDGs for companies have been mentioned as a potentially cost-effective way to reach large numbers of companies. Presenting good cases on company initiatives linked to SDGs for peers. Training on how to incorporate SDGs into business strategies and activities. (Denmark) Awareness raising activities/communication, using for instance sporting events to spread information about SDGs and company, country and Nordic commitments to answer to SDG challenges. Can be an effective way to raise public awareness and get commitment from different stakeholders and public. (one example that was mentioned was commitments made during Rio Olympics). Nordic countries could cooperate on communication when it comes to implementing Agenda 2030. This could be e.g. done at the same time with the European Sustainable Development Week, or with the anniversary of Agenda 2030. Communication not only to public, but also to investors: Why to invest in sustainable development? Networking of scientists, media and business on how to communicate appealingly to politicians and the public. Nordic “He-for-She” campaign on gender equality.</td>
</tr>
<tr>
<td><strong>Show Nordic Leadership in international networks</strong></td>
<td>The main positive impact of the Nordic strategy on sustainable development has been on the international fora where the strategy has been presented as the first regional SD strategy. Finding common voice and message on communicating towards UN and EU as well as other forums. The stellar reputation and brand of Nordic countries (regarding sustainable development and society, human rights and development co-operation) should be leveraged in different fora. Today messages are not coordinated, but because of similar societies and values are quite aligned anyway the messages come out pretty similarly. Common message could be more effective and be used for branding the Nordics and increased influence as well as tools for companies seeking business on the global arena. The European Sustainable Development Network (ESDN) could possibly be used more by Nordic countries. ESDN is an informal network of public administrators and other experts dealing with sustainable development (SD) strategies in Europe. It may not be necessary to build new networks for Nordic SD operation but to use more the existing ones. Global Compact and the Global Compact Nordic Network of Nordic companies. Nordics should act together with their neighbours, the Baltics on the SDGs. Collectively there’s a powerful purchasing power. Regional SDG-related policies can be pursued as collaborative effort and embody Goal 17. Help each other to rethink and recalibrate the North-South thinking that characterized the MDGs to the universality of partnerships needed to implement the SDGs.</td>
</tr>
<tr>
<td><strong>Use the existing Nordic cooperation to promote SDG’s</strong></td>
<td>Use the existing organisations, groups and fora, instead of creating new ones. There exists a multitude of Nordic organisations, committees, working groups etc. that could be harnessed with the responsibility to bring forward specific SDG topics, for example the environmental working groups under the NCM on environment-specific SDGs. Build on priorities already embedded and funded in the Nordic co-operation, in the sectorial action plans, and synergies on existing multi-sectorial large programmes. Build on best practice and success stories such as the Nordic Swan Ecolabel. Collect a calendar of the biggest Nordic events and use these as an active forum for promoting the SDG programme.</td>
</tr>

<td>Energy</td>
<td>The Action Programme for Nordic Cooperation in Energy Policy 2014–2017 supports the development of environmentally and climate friendly energy solutions, and climate neutral or low emission societies in the Nordic region and globally. The programme is structured around the themes of electricity market, energy efficiency, renewable energy, energy research and horizontal energy related questions (transport, international co-operation, sparsely populated regions). A new Action Programme will be developed in 2017, in light of the EU Energy Union and the ongoing review of Nordic energy co-operation (J.Ollila).</td>
<td>Affordable and clean energy (7) Sustainable cities and communities (11)</td>
<td>Nordic Energy Research</td>
</tr>
</tbody>
</table>
### Environment

The Nordic Environmental Action Plan 2013–2018 contains e.g. the following SDG themes: Inclusive green development, incl. sustainable production and consumption, resource efficiency and waste; Climate change and air pollution, short-lived climate forcers; Biological diversity and ecosystems (both land-based and marine); Chemicals with adverse impact on human health and the environment.

**Budget priorities 2017 of the sector include:**
- Supporting resource efficiency and circular economy (incl. eco-design and new business models)
- Supporting the development of product related environmental information and sustainable consumption
- Working for the abandonment of environmentally hazardous subsidies
- Work for the protection of ecosystems and biodiversity on land and in the seas, with a specific focus on the Arctic and Barents region
- Support the ambitious follow up of climate negotiations at COP21, visibility at coming COPs.
- Work to promote ecosystems in the Baltic Sea, North East Atlantic and Arctic, battle marine waste and marine intoxication
- Promote the development of regulations concerning hazardous chemicals

### Finance

Main priorities of the Finance sector are to work for stable and sustainable economic growth, the development of the Nordic welfare model, economic integration and promotion of joint Nordic interests in international fora. One of the main points in the action plan is to work towards a clearer incorporation of economic aspects into the Nordic strategy for Sustainable Development.

### Gender Equality

The 2015–2018 programme for co-operation (which is supplemented by annual action plans) has two overarching themes: the public sphere, and welfare and innovation. There are also two horizontal themes, sustainable development with a focus on diversity being one. The other is participation by men and boys in gender-equality work. Gender mainstreaming is also part of the strategy to implement the program.

Gender equality is also a cross-sectorial theme in all sectors of the Nordic co-operation, and central in the work for sustainable development.
<table>

</tr>
</thead>
<tbody>
<tr>
<td><strong>Health &amp; Social Affairs</strong></td>
<td>The Strategy of the Health and Social Affairs Sector from 2013 aims to promote sustainable welfare and health in the Nordic region through actions on social security in the Nordic region, work on prevention, increased quality and security in the social and health sector, and promoting innovation and research. It is accompanied by an Action plan. The Future Nordic Co-operation on Health-report by Bo Kønberg 2014 gives 14 proposals, many of which have been brought forward in recent programme and projects including e.g. battling antibiotic resistance, co-operation on highly-specialised treatment and rare diagnoses, register-based research, public health, psychiatry, pharmaceuticals, patient mobility, welfare technology, eHealth, and health security. The Action Plan for Nordic Co-operation on Disability 2015-2017: Human rights • Diversity • Freedom of Movement, outlines actions for implementation of the UN convention UN Convention on the Rights of Persons with Disabilities, to strengthen the inclusion and equality of persons with disabilities in Nordic societies and to remove barriers of free movement in the Nordic region.</td>
<td>No poverty (1) Good health and well-being (3) Sustainable Cities and communities (11)</td>

</tr>
<tr>
<td><strong>Labour</strong></td>
<td>The programme for co-operation on labour and employment issues 2013–17 (&quot;Fælles udfordringer og nordisk nytte&quot;) focuses on the long-term challenges posed by globalisation and demographic trends as well as the challenges posed by the economy. Priorities are: extending and upgrading the qualifications of the workforce to meet the needs of the labour market; combating unemployment among vulnerable groups and reducing long-term unemployment, especially among young people; encouraging a positive working environment; promoting the sustainable use of wager-earners’ resources; preventing social dumping and discrimination in the labour market; ensuring a good balance between employee rights and flexibility, and closer Nordic collaboration on international regulation. The strategic examination of Nordic co-operation in the field of working life (Working life in the Nordic region – Challenges and proposals, P. Nielson) contains 14 proposals for future Nordic co-operation in working life with the overall goals of promoting e.g. life-long learning opportunities, integration of immigrants, gender equality, productive employment and decent work for all.</td>

Annex 5: Summary of Dialogue meeting on Nordic Cooperation in response to the global 2030 Agenda for Sustainable Development

Time and place: Tuesday 29 November 2016 at 9 am to 4 pm in Helsinki.

Brief Summary

The aim of the meeting was to seek guidance on how the Nordic Council of Ministers can best contribute to the implementation of the 2030 Agenda for Sustainable Development. The meeting allowed a broad and diversified group of stakeholders come together to discuss, debate and outline a future joint Nordic initiative in response to the Sustainable Development Goals (SDGs), which the Nordic Council of Ministers expects to launch during 2017.

The meeting was opened by a keynote provided by Mr. Pekka Haavisto, Member of Finnish Parliament, who outlined the importance of action towards implementing the SDGs and how Nordic countries can act together.

Ms. Annika Rosing, Head of Department of Growth and Climate at the Nordic Council of Ministers introduced the aim of the meeting and the process with planning a new Nordic Initiative on Sustainable Development in response to the 2030 Agenda. The initiative will not aim to coordinate national measures for implementing the Agenda, but rather identify areas, where Nordic co-operation could be meaningful.

Mr. Mikko Halonen (Gaia Consulting) and Dr. Åsa Persson (Stockholm Environment Institute) presented preliminary findings from the mapping of Nordic implementation of the 2030 Agenda that Gaia and SEI have prepared during the past months and which
served as background material for the discussions at the dialogue meeting (presentation enclosed).

Participants were asked to provide feedback on the mapping and this feedback will be considered when finalising the mapping report for the Nordic Council of Ministers.

For the working sessions, participants were divided into working groups, which worked on the following topics:

**Session 1**

Nordic Cooperation on the 2030 Agenda for Sustainable Development – bringing the good ideas together (plenum). Participants were invited to suggest topics for the new programme and these were further prioritized and discussed in groups.

**Session 2**

Defining the added value of Nordic implementation of the 2030 Agenda for Sustainable Development (in groups). The participants were encouraged to use the suggested topics and themes in order to outline the main aims and features of a Nordic programme in response to the SDGs.

The input from sessions 1 and 2 was brought forward in.

**Session 3**

Participants discussing and defining main stakeholders for the Nordic programme they had suggested as well as key messages for those stakeholders. In conclusion, participants discussed how to communicate the Nordic programme and the SDGs in the Nordic countries.

Subsequently the main results of the group sessions were briefly presented and discussed in plenum. A synthesis of the main outcomes of sessions 1–3 is enclosed.

Ms. Annika Rosing concluded the meeting by thanking all participants for their engagement and valuable input in outlining the further process. She noted that the meeting had raised many important topics, including:
possible thematic focus areas and themes for the programme (sustainable consumption and production, energy efficiency and climate, gender equality, integration and inclusion, democracy)
the importance of clearly and broadly communicating the 2030 Agenda and involving all key stakeholders
the need for fora and networks for concretely implementing the 2030 Agenda;
the importance to focus on all policy levels (national, regional, local)
the need to focus both on Nordic gaps and on Nordic strengths
the potential to use Nordic co-operation as a tool to push difficult agendas and find new methods and solutions.

The Nordic Expert Group for Sustainable Development will discuss a programme proposal early 2017, which will thereafter be circulated for agreement in relevant sectors of co-operation. The Nordic Ministers for Cooperation will take a decision on the final programme in the summer of 2017.

The Nordic Expert Group for Sustainable Development will also look into the question how the process could best benefit from the engagement of the participants of the dialogue meeting. Conclusions from the dialogue meeting will be sent out to the participants for information and for possible comments and suggestions.

Annex to the Summary of the Dialogue meeting on Nordic Co-operation in response to the global 2030 Agenda for Sustainable Development

Outputs of the working sessions

This Annex contains direct output of the work group sessions of the dialogue meeting and will serve as one of the input materials for the programme to be developed by the Nordic Council of Ministers Expert Group on Sustainable Development.
Nordic Programme for Sustainable Development – Initial ideas for Nordic Co-operation Projects

The following ideas resulted from the workshop’s first-round synthesis, when discussing potential topics to be addressed by a Nordic co-operation project on the 2030 Agenda implementation. One of the recurrent themes was sustainable consumption and production, and the various equity implications of consumption and production patterns – and with major cross border implications (e.g. the question of what is consumed at “home“ can have increasingly global implications).

1. Sustainable consumption and production

In brief, the project links directly to SDG 12, 16, 17 and indirectly to most SDGs.

Potential components & themes:

- Risk has to be at the core (to use terminology understood by the private sector).
- There is a need for innovative tools and disruptive partnerships linking governments, businesses and consumers.
- Only in this manner can major finance flows and investment decisions by the private sector (production/consumption) be turned sustainable, “SDG-aligned”.
- Governments have a role with policy instruments and funding.
- Through value chain impacts (including raw material use, among other) sustainability impacts of many companies are international/global, hence consumer decisions have global impacts.

2. Sustainable consumption and production

In brief, the project proposals relates to SDGs 8, 12, 17.

Potential components & themes:

- Sustainable value chains (both consumers and producers).
- Circular economy / circular bioeconomy.
- Communication.
3. Sustainable consumption

In brief, the project shall address responsibility of regulation, responsibility of service-offering companies (producers), and responsibility of individuals (consumers as active citizens).

Potential components & themes:

- Creating alternatives to current definitions to economic growth (a sustainable alternative to GDP?).
- Finding new definitions for sustainable growth and well-being.
- Creating a new sense of citizenship (new identity replacing a consumer identity).

4. Food production and consumption

In brief, the project links to SDG 12 and others, and targets both producers and consumers.

Potential components & themes:

- Life cycle assessment.
- Ecological footprint.
- Food security.
- Creating tools for making sustainable choices.
- Ecolabels: tools for sustainable consumption (Example: link Svanen to SDGs).
- Using tools like “nudging” to promote sustainable lifestyles and a sustainable society.

5. Sustainable living

In brief, the idea is for Nordic co-operation to become a driver for sustainable living.

Potential components & themes:

- Empowerment of people to choose (we often do not choose sustainability).
Incentivise positive competition (it’s more efficient for people-to-people than from government-to-government), with a proposed slogan: “Do it better than your Nordic neighbour”.

“Sharing and caring” life – a sharing economy, think Uber, share a car, make policies that facilitate these kinds of behaviour/set-ups

Also, don’t just look at ourselves but also look at others; be humble (Nordic is not the only way). Then these ideas (knowledge and services) can be exported.

Circular economy and sustainable production and consumption.

Communication is important around all of this – partnering “Nordically”.

6. How to create a climate friendly society

In brief, the idea is to design a programme or programme component to guide Nordics towards a climate friendly society, by creating incentives.

Potential components & themes:

- Reduce dependency on fossil fuels.
- Adapt to fossil-neutrality.
- Aim to understand and modify consumer behaviour.

7. Human rights, rule of law and democracy

In brief, there should be high-level political discussion on priorities for the future of the Nordic welfare model. In sum, to believe and uphold the inclusive and resilient Nordic model in our changing world.

Potential components & themes:

- Reviving the discussion conducted in the 50s and 60s when the foundations of the Nordic model was outlined and developed.
- Emphasis is on multi-stakeholder engagement including the grassroots level/local discussion.
- Implementation to be decided by topical experts.
8. Nordic welfare model

In brief, the concept is “bottom-up” engaging civil society, business, and municipalities.

Potential components & themes:

- Company role models for integrating Agenda 2030.
- Awareness-raising – communication platform (participation / social inclusion/ economic growth) – benefits.
- Emphasise gender equality.

9. Inclusive society

In brief, this idea is for a Nordic “Whole of society” approach to designing an implementation programme: How can this be done?

Potential components & themes:

- Translate the SDGs and reach out to target groups.
- Facilitate engagement in SD.
- Measure progress.
- Exchange best practices.
- Create business opportunities.
- The Nordic Whole of Society approach is for inclusion, engagement, empowerment.
- Concrete tools this programme can finance include: a Nordic platform for knowledge exchange / action/ find partners, and joint projects: funds for knowledge exchange, etc.

10. Integration

In brief, noting that many of the solutions for the global challenge of integration are solved on local level, the project/initiative focuses on establishing a network for municipalities for exchange of best practices.

Potential components & themes:
• Resilient cities and country sides at the focus.
• Open public spaces provided and nurtured.
• Information and education for locals.
• Information and education for immigrants.
• Dialogue and interaction.
• Links with forthcoming Prime Minister’s Initiative with one theme focus “Sustainable cities”.
• Role of businesses to be understood and harnessed e.g. through local employment opportunities.

11. Gender and inequality

In brief, the idea is to address gender and other inequities that exist in the Nordic countries – despite that Nordic countries are seen as leaders.

Potential components & themes:

• Cross-national, cross-SDG.
• Establish an ambitious set of indicators -> joint Nordic monitoring of inequality/gender.
• Cross-councils / ministries.
• Multi-stakeholder platform (include CSO, Business, Academia).
• Gap-analysis – identify crucial areas for joint efforts.
• MR-SAM (co-operation) – decision maker / lead coordinators MR-JÄM (gender equality).
• Timeline: Gap Analysis -> action plan -> monitoring -> reporting regularly.
• Emphasis on leaving no one behind.

12. Communication and education

In brief, governments should communicate SDGs through schools.

Potential components & themes:
• Make use of EU – SD week: e.g. with children and youth preparing SDG activities during the school year.
• Government reform in education/curriculum development.
• Making sure SDGs are communicated in a way addressing all aspects of life (not only environment).
• Communication & education to ensure that the interconnections between SDGs are understood.

13. Communicating the SDGs in and to the Nordics – Communication concepts project

In brief, the project aims at mapping existing SDG-relevant activities and useful communication concepts.

Potential components & themes:

• Integrating SDS awareness building activities in all education activities and including SDG teaching in curriculum. Prepare the next generation for awareness.
• Sharing best practices regarding communication across the Nordic countries (e.g. “World’s Best News” in Denmark).
• Developing web platforms with existing and new communication concepts (cost effective sharing) that can be used by other Nordic stakeholders/countries.
• Nordic SDG Ambassadors that could bring attention to Agenda 2030 and Nordic actions.
• Using existing Nordic Council meetings and events to include SDG/reflection and challenges.
• Cross-cutting initiative regarding SDGs.

14. A Project on common principles for Nordic Implementation of SDGs implementation

In brief, the project aims at a plan how we can help realise the ministers’ intents.

Potential components & themes:
- Market Nordic strengths globally.
- Improve global economic competitiveness & safeguard welfare state.
- Plan principles for implementation.
- Cross border synergies identification.
- Recognise and confront paradigm shift.
- Synthesis thinking.
- Walk the talk (e.g. gender).
- Take a point of departure on what we need to do better and why.
- Issue a competitiveness report on what the Nordics do together.
- Pool Nordic strengths.
- Identify common denominators.
- Use active green competition as an asset.

**1. Nordic Programme for Sustainable Development – Programme Concepts**

The following ideas were synthesized outputs of the group session 2 of the dialogue meeting, as presented by the groups in the plenary session.

**Table 18: Sustainable Development – Programme**

<table>
<thead>
<tr>
<th>A</th>
<th>The programme should have a twofold aim of</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>Global policy strengthening through national-level co-operation, and</td>
</tr>
<tr>
<td>b)</td>
<td>Strengthening the knowledge sharing on the local level</td>
</tr>
</tbody>
</table>

On the national-global level the programme should focus on:
- Nordic strengths and where we are advanced
- Building Nordic-global partnerships and macro-regional (Nordic-Baltic region) co-operation
- Activities such as HLFF side events, policy consensus, sharing best practice

On the local level, the programme should focus on:
- Gaps and where we are lagging behind
- Strengthening the knowledge sharing of municipal/regional actors
- Activities such as IT-platforms, projects, seminars, documenting/showcasing examples

For both aims, there is a need to choose among activities and focus the limited resources, in order to have impact.
The programme should aim at enhancing Nordic leadership and redefining Nordic identity and welfare model. The programme should have two main themes:

- **Sustainable consumption and production**
- **Rethinking the Nordic welfare model**

The main instrument would be facilitating an international platform for the “sensitive” SDGs e.g. 5/16/10/12 (where 5, 16, 10 are Nordic strengths and 12 is Nordic weakness)

**Actions:**
- Need for measuring, reporting and verifying actions
- Suggesting legal SDG framework for municipalities (like Agenda 21 did)
- Like commitment 2050 in Finland, but more ambitious
- Public-private partnerships: Using public money to leverage more private funds
- OECD: policies policy coherence (Nordics have strong role)
- Carrot and stick in governance
- Empower the citizens
- **Message of the programme:** Through Nordic co-operation, things can be lifted a level up

**C**

The programme should aim at:
- **Relevance:** the programme has to be relevant and tangible for all: “Make it easy!”
- **Civil society**
- **Business/firms**
- **Government**
- Flexibility: The Programme needs flexibility
- Partnerships: Use the power of partnerships
- Indicators: Create/use relevant indicators
- Values: Use the “Nordic values” and “Nordic way”
- Identity: Create a “Sustainable Identity”
- Youth: include and involve the youth
- “Power of personal example”
- **Main message:** Do it yourself first – Then you can be an example

**D**

The programme should aim at supporting the national coordinators for implementing Agenda 2030 – share good practice on national implementation through e.g. meetings

**Main components:**
- Common Nordic voice for Agenda 2030 in EU and UN
- Mainstream gender/inclusion in all goals
- Peer to peer learning and stakeholder networking, incl. regions, municipalities etc.
- Funding pilots + transfer and scale-up of good practices
- Prizes for most inclusive employer etc., sustainable municipalities etc.
- Prioritize some targets: Sustainable consumption/living, sustainable welfare state, integration
- Focus on civil society’s role – engaging bottom-up
- Coordinate with existing Nordic programmes (on integration for example)
- Goal oriented, stimulate national governments and cross-sectorial co-operation

**E**

The programme should aim at:
- Pinpointing the added value of Nordic work
- What is not addressed by/on a national level
- Getting the local level involved
- Bringing local knowledge to Nordic level and share best practices
- Focus on one topic and show interrelation of all goals (e.g. consumption)
- Empowerment, awareness raising, influence policy making
The programme should aim to solve: How can we help realise the ministers' intent
Market Nordic strengths globally
Improve global economic competitiveness & safeguard welfare state
Nordic voice already strong but can be leveraged – the Nordics and our welfare model “define” the SDGs.

Principles for implementation:
Cross-border co-operation ➔ synergy (seize opportunities for maximal impact)
Recognise/confront paradigm shift
Synthesis thinking ➔ all in (mindset)
Walk the talk (eg. gender)
Take point of departure in have to be better & why, quality – resilience – risk
Program should be value based with humans in the center – aim for prosperity instead of just profitability (people, planet, prosperity, peace, partnerships...)
Integrate communication (both in Nordics and globally)
Issue a competitiveness report on what the Nordics do together
Identify common denominators
Pool our strengths
Active green competition as an asset

The programme should aim at the main message: “Responsible, engaging, challenges opportunities across sectors and borders for all.”
Many frameworks for implementation: What does it mean for the Nordic countries?
Nordic co-operation = building on strengths, realising opportunities
Need for policy coherence
Need to prioritise among the SDGs
Greatest challenges = greatest opportunities
Communication to engage citizens
Programme should require engagement from several sectors as well as Nordic countries
Added value of the programme:
Engaged population
Sharing solutions and benefit from shared Nordic approach
Raising awareness and responsibility
Making each other responsible
Health competition (borrowed from another session: what would my Nordic neighbour do?)

The programme should aim at the main message: "Up-scaling frontrunning local #Agenda2030 solutions by #Nordic co-operation. "living lab”
Key: pinpoint the added value of Nordic work
Approach: What is not addressed by/ on a national level?
Get the local level involved by bringing the local knowledge to Nordic level and share best practices
Focus on one topic and show interrelation of all goals – e.g. consumption
Aim: empowerment, awareness-raising, influence policy-making

The programme should aim at the main message: “Thematic PCSD (policy coherence for sustainable development) peer review for national and Nordic policy recommendations on Agenda 2030 implementation.”
Nordic programme should focus on policy coherence in the field of specific SDGs (e.g. sustainable production and consumption, immigration).
It should do this through national peer-review and policy recommendations
Policy coherence: What to do and why?
Cross-cutting in nature; catalyse ambitious leadership; not a coordinating role but rather to assure quality; an instrument for Nordic countries to make Agenda 2030 more concrete/ operational; gap analysis targeting SDGs where we are lagging behind.
Implementation: How to do it?
Ensure political communication – allocate responsibility and change mindset; peer-review; open dialogue to share experiences for next steps; identify where there are Nordic synergies; "Better policies for coherence for sustainable development“ – showcase these.

Sustainable Development Action – the Nordic Way
J The programme should aim at concentrating on what we do well together (shared values/ agreement areas like energy, green tech) and on what we don’t do well (communication)
Benefits: prosperity not only for profits, joint actions to strengthen the Nordic approach
How can you contribute?: Need a driver (leader) + finance

K The programme should aim at exchange of knowledge regarding national implementation of SDG policy
Are there shared goals?
Agreement on Nordic SDG gaps and strengths (Nordic level gaps and strengths)
Main activities:
Create strategic partnerships (business, civil society, government) on selected issues – e.g. main gaps (consumption?) and main strengths (equality?)
Approach: avoid the “what” and focus on the “how” (partnership, etc.) – Nordic understanding of the goals (not Nordic implementation of the goals)

2 Nordic Programme for Sustainable Development – Stakeholders

This section consists of synthesized output of the group session 3 of the dialogue meeting, as collected from the work sheets.

Several groups recommended to focus mainly on:

- Developing global partnerships for policy influence.
- Develop Nordic public-private strategic partnerships involving public and private money (redirecting, mobilising and pooling existing resources), public sector actors (especially on the local level i.e. cities and municipalities, civil society), and empowered citizens, especially the youth (as the future consumers and the recipients of legacy of the here and now).

Table 19: Sustainable Development – Stakeholders

</tbody>
</table>

**Private companies**
- Supporting strategic Nordic public-private partnerships
- Key stakeholders for Sustainable Consumption and Production
- Both company level and employers are needed
- Key stakeholders for Sustainable Consumption and Production

**NGO/CSOs**
- E.g. Sports, pensioners, unions
- Support NGO meetings, mobilizing people locally, also marginalised groups
- Supporting strategic Nordic public-private partnerships

**Youth**
- Key stakeholders as the future consumers and as recipients of legacy of the here and now

**Academia**
- Key stakeholders for Sustainable Consumption and Production
- Key stakeholders for Rethinking the Nordic Model

**Think tanks**
- Supporting global partnerships
- Supporting strategic Nordic public-private partnerships

**Educational sector**
- On the local level, the municipalities and the educational sector are key stakeholders

**Cultural sector**
- E.g. Sports, pensioners, unions
- Support NGO meetings, mobilizing people locally, also marginalised groups

**Citizens**
- All citizens to be included
- Key stakeholders for Sustainable Consumption and Production
- Key stakeholders for Rethinking the Nordic Model

**Media**
- Was missing in the mapping, important for raising the awareness

**Parliamentarians**
- Supporting global partnerships
- Supporting strategic Nordic public-private partnerships

**Nordic Council**
- Supporting global partnerships
- Supporting strategic Nordic public-private partnerships

**Baltic Council**
- Supporting global partnerships
- Supporting strategic Nordic-Baltic public-private partnerships

**UN organisations**
- Supporting global partnerships

**EU**
- Supporting global partnerships
- Supporting strategic Nordic public-private partnerships

---

170  
*Sustainable Development Action – the Nordic Way*
3 Nordic Programme for Sustainable Development – Communication

This section consists of synthesized output of the group session 3 of the dialogue meeting, as collected from the work sheets.

**Key messages – Examples**

- SDGs = progress in the world.
- We can only do this together.
- All steps in the right direction matter.
- Focus on opportunities, sharing solutions, why joint Nordic action works.
- Prosperity instead of just profitability.

**Key target groups – Examples**

- Define Nordic added value; connect to existing priorities; do stuff (action leads to communication); common challenges to gather around; school curriculum.
- Involve public and private stakeholders together (like Society’s commitment in Finland).
- Approach sustainability as growth and business opportunities.
- Disseminate information to policy makers.
- Communication to international organisations to strengthen Nordic message.
- Formal education.

**Communication channels and actions – Examples**

- Matchmaking across borders: solution labs, creative launches.
- Communicating the SDGs through teaching materials.
- Funding instruments for communication (participation in meetings etc.)
- Association of municipalities promoting policies for global developments and sustainability.
• Creating a Nordic sustainability council / network for information, policy dialogue.
• Building ICT and social media platforms.
• Building platforms such as the Finnish Society’s Commitment 2050
• Using the media (model after e.g. World’s best news).
• New year’s speeches by PM or queens, kings, presidents, on the importance of SDGs and the next 14 years.
• Social media e.g. tweets on #Nordic co-operation.
• Health competition (borrowed from another session: what would my Nordic neighbour do?).
• Need for participation → Nordic champions.
• Annual celebration of SDGs (like Global Goals week).
• Nordic sustainability prizes to companies, civil society, other actors.
• Nordic SDG Ambassadors.
Sustainable Development Action – THE NORDIC WAY

The 2030 Agenda, adopted by the UN General Assembly in September 2015, outlines an ambitious and universal plan of action for people, planet and prosperity as it seeks to strengthen universal peace and freedom. This report presents national and Nordic action on Agenda 2030 with the aim to inform and support the Nordic Council of Ministers in formulating a new Nordic Sustainable Development Programme.

All Nordic countries are engaged and strongly committed to implementing Agenda 2030 and there is a broad societal interest in joint Nordic action. The existing Nordic Strategy for Sustainable Development and several other key initiatives within Nordic cooperation already contribute to the goals of Agenda 2030. A new Nordic Sustainable Development Programme can build upon a strong foundation and add further value to the national and international work done by the Nordic countries.
