

## Errata

### Technical Report: Nordic Green to Scale for countries. Unlocking the potential of climate solutions in Kenya and Ethiopia

#### Ch. 8.3.4 Abatement costs, p. 69

##### Original text:

Adopting data from Ecofys's report (2015), abatement cost is USD/tCO<sub>2</sub> 11. As animal production costs are similar in Brazil and in the two target countries, we do not apply PPP in this instance. Thus the abatement cost is USD 90.7 million for Kenya and USD 152.7 million for Ethiopia.

##### Corrected text:

Adopting data from Ecofys's report (2015) and recognizing the expected savings in the East African context through avoided livestock loss, we used abatement saving of 11 USD/tCO<sub>2</sub>. Thus the abatement saving is 90.7 million USD for Kenya and 152.7 million USD for Ethiopia.
